Turkish folk medicinal plants, IX: Ovacık (Tunceli)

Ertan Tuzlaci¹, Ahmet Doğan¹

ABSTRACT: The aim of this study was made to reveal the plants used as traditional folk medicine in Ovacık (Tunceli). For this purpose, the field works have been done between May 2007-May 2008 in April, May, June and July lasting for 30 days, in total. During this research all the settlement centers (including 33 villages) have been visited, the specimens of the plants used as folk remedies have been collected and the information such as local names, ailments treated or therapeutic effects, plant parts used, method of administration, dosage, duration of treatment have been recorded. The collected plant specimens are kept in the Herbarium of the Faculty of Pharmacy, Marmara University (MARE). As a result of identification of 76 plant specimens, 67 species used as a traditional folk medicine, have been determined. Among them 65 species are wild and 2 species are cultivated plants. These plants and their local usage in treatment are presented in a table in the text. It was found out that the plants recorded in Ovacık are mostly used for cold, diabetes and wound.

KEYWORDS: Folk Medicine, Medicinal Plants, Ovacık, Tunceli, Turkey

INTRODUCTION

Our research area, Ovacık, is a district of Tunceli that is located on the north west of eastern Anatolia. Ovacık is surrounded by Kemah (Erzincan) from the north, Hozat from the south, Pülümür and city of Tunceli from the east, and Kemah (Erzincan) and Çemişgezek from the west. Munzur and Mercan Mountains form the large portion of the boundaries of these districts (Figure 1).

Ovacık takes its name from the small plain, approximately 74 km², that is located between Munzur and Mercan mountains (Figure 2). The altitude of the center of Ovacık is 1300 m. Ziyaret tepesi (3071 m) is the highest point of the Ovacık district (1). There are several natural lakes in the peaks of Munzur mountains (Figure 3).

MATERIAL AND METHODS

Data was collected via face to face interviews with local healers, experienced adults, and patients. Data included local names, uses/ailments treated, part(s) of plants used, and methods of preparation.

The plant specimens are kept in the Herbarium of the Faculty of Pharmacy, Marmara University (MARE). The "Flora of Turkey and the East Aegean Islands" (2) was mainly used for the

identification of the plants. All the specimens were collected by A. Dogan.

RESULT AND DISCUSSION

As a result of identification of 76 plant specimens, 67 species used as a traditional folk medicine, have been determined. Among them 65 species are wild and 2 species are cultivated plants. While most of these plants are used solitary some of them are used in mixtures.

In the folk medicinal plants of Ovacık, eight taxa are endemic to Turkey *Allium macrochaetum* subsp. *tuncelianum* (Sivas, Tunceli), *Cephalaria speciosa* (Erzincan, Van, Tunceli), *Convolvulus galaticus* (Amasya, Ankara, Bolu, Burdur, Denizli, Elazığ, Eskişehir, Gaziantep, Kayseri, Konya, Kütahya, Malatya, Mardin, Niğde, Şanlıurfa, Tunceli, Van, Zonguldak), *Iris sari* (Amasya, Çankırı, Elazığ, Erzurum, Gaziantep, Kayseri, Niğde, Sivas, Tunceli) (Figure 4), *Hesperis schischkinii* (Erzincan, Erzurum, Muş, Tunceli) (Figure 5), *Hyacinthus orientalis* subsp. *chionophilus* (Adana, Kahramanmaraş, Kayseri, Sivas, Tunceli), *Origanum acutidens* (Bingöl, Erzincan, Erzurum, Gümüşhane, Kars, Malatya, Sivas, Tunceli), *Tchihatchewia isatidea* (Erzincan, Erzurum, Giresun, Sivas, Tunceli) (Figure 6,7) (2).

Türkiye'nin halk ilaçı bitkileri, IX: Ovacık (Tunceli)

ÖZET: Bu çalışmanın amacı Ovacık (Tunceli) yöresinde geleneksel halk ilaçı olarak kullanılan bitkileri ortaya çıkarmaktır. Bu amaçla, Mayıs 2007- Mayıs 2008 tarihleri arasında Nisan, Mayıs, Haziran, Temmuz ayları içinde toplam 30 gün süren bir arazi çalışması yapılmıştır. Bu araştırma esnasında yöredeki 33 köyün hepsine gidilerek halk ilaçı olarak kullanılan bitkilerden örnekler toplanmıştır. Bu bitkilerin yöresel adları, tedavideki kullanımı, yararlanılan kısımları, ilaçların hazırlanışı, uygulanış şekilleri, dozları, uygulama süreleri hakkında bilgiler derlenmiştir. Toplanan bu örnekler Marmara Üniversitesi Eczacılık Fakültesi Herbaryumu'nda (MARE) bulunmaktadır. Sonuç olarak yörede toplanan 76 bitki örneğinin teşhisini sonucu 67 türden geleneksel halk ilaçı olarak yararlanıldığı saptanmıştır. Bunlardan 65'i yabani, 2'si ise yörede yetişirilen bitkilerdir. Bu bitkiler ve bunların tedavideki kullanımları metin içinde tablo şeklinde sunulmuştur. Ovacık yöresinde kaydedilen bitkilerden en çok soğuk algınılığı, şeker hastalığı ve yara tedavisinde yararlanıldığı tespit edilmiştir.

ANAHTAR KELİMELER: Halk ilaçları, Tıbbi Bitkiler, Ovacık, Tunceli, Türkiye

Decoction and infusion are the methods mostly used for the preparation of the folk medicine.

Findings about the use of the plants are presented in Table 1. The plants are arranged in an alphabetical order according to their latin names. The cultivated plants are marked with asterisk.

According to the comparison (Table 2) with the other local ethnobotanical studies (3,4) in the eastern Anatolia, there are only three plants (*Achillea biebersteinii*, *Plantago major* subsp. *major*, *Urtica dioica*) which are using with the same purposes in Ovacık (Tunceli), Kürecik (Malatya) and İlica (Erzurum). These plants and their similar usages are also recorded in the other places in Turkey: *Achillea biebersteinii* (Isparta), *Plantago major* subsp. *major* (Giresun, Trabzon), *Urtica dioica* (Balıkesir, Çanakkale, Giresun, Isparta, İstanbul, Muğla, Trabzon) (5). In addition, in thirteen plants of the Table 2, there are also some similar usages in two localities.
