ABSTRACT

This study has revealed first findings for water mites in Çanakkale Province, Biga Peninsula. According to the results of the field survey between 2008 and 2009, 11 Hydrachnidia species; *Eylais megalostoma* Koenike 1897, *Lebertia fimbriata* Thor 1899, *Torrenticola (barsica)* (Szalay 1933), *Limnesia walteri* Migot 1926, *Hygrobates longiporus* Thor 1898, *Hygrobates nigromaculatus* Lebert 1879, *Hygrobates longipalpis* Hermann 1804, *Atractides robustus* (Sokolow 1940), *Atractides nodipalpis* Thor 1899, *Atractides longirostris* (Walter 1925), *Mideopsis crassipes* Soar have been described at the Tuzla, Kocabas Streams and Ayazma Creek for the first time.

Introduction

Water mites constituting an important group in aquatic ecosystem are remarkable with their variable morphological structures and range from 0.2 to 10 mm in size. Water mites can be regarded as the indicator species due to their limited tolerance to variable ecological conditions. They are not inhabitants of meso-sabrobiotic environment. They are susceptible to all kinds of habitat alterations as a result of human activities. Their parasitic association with insects and even vertebrates increase their dispersal and cause to be used as biological control agents (Di Sabatino et al. 2008).

Free-living individuals inhabit groundwater, hot or cold springs, ponds, swamps, lakes, as well as marine environment, while parasite forms occupy the mantle cavity of mollusks and freshwater sponges (Esen and Erman 2013).

Over 6000 species have been described worldwide,

representing 57 families, 81 subfamilies with more than 400 genera (Di Sabatino et al. 2008). In Turkey, about 270 species of water mites are known so far (Özkan 1981; Özkan 1982; Erman and Özkan 1997; Tuzovskij and Gerecke 2003; Boyaci and Özkan 2004; Aşçı 2005; Uysal 2005; Erman et al. 2006; Pešić and Turan 2006; Erman et al. 2010; Güller et al. 2011; Aşçı et al. 2011; Bursali et al. 2011; Boyacı et al. 2012a; Boyacı et al. 2012b; Boyacı et al. 2012c; Esen et al. 2012; Esen and Erman 2013).

In this study, 11 water mite species identified from the running waters of Canakkale province (Biga Peninsula) which are representing first records for this region.

Material and methods

The study area is located in the western part of the Marmara Region in North-West Anatolia (Figure 1). Seasonal field survey was carried out at the running waters of Çanakkale Province, Kocabas, Tuzla Stream and Ayazma Creek (Upper Karamenderes Stream) which are rising from Kazdağı (Kaz Mount) Region. This study was conducted between 2008 and 2009. Water mites were sieved and collected by pasteur pipettes from the white containers into Koenik fluid (5 units of glycerin, 2 units of acetic acid and 3 units of distilled water). Systematics

1. Eylaidae Leach, 1815

1.1. *Eylais megalostoma* Koenike, 1897

2 (δ) individuals of this species were identified from Tuzla Stream ($39^{\circ}55'813''N$, $26^{\circ}15'915''E$, 7m Alt.). The sampling station was densely vegetated with aquatic plants such as *Cladophora* spp., *Ceratophyllum* spp., *Potamogeton* spp.

Distribution in Turkey: This species has been recorded from freshwaters of Erzurum and Van (Özkan 1982), Elazığ (Erman and Özkan 2000; Erman et al. 2006), Afyon (Özkan et al. 2003; Boyacı and Özkan 2004), Bingöl (Esen and Erman 2013), Kemaliye (Erzincan) (Esen et al. 2013).

2. Lebertiidae Thor, 1900

2.1. *Lebertia fimbriata* Thor, 1899

2 (φ) specimens belong to this species were identified in Kocabaş Stream, Yenice District ($39^{\circ}93'861''N$, $27^{\circ}23'224''E$, 266 m Alt.). This station has almost a constant water regime throughout the year. There is no aquatic vegetation observed in the stream, but the stream bed was surrounded by high trees such as oriental plane and salix. Domestic solid wastes left nearby the steam were observed at the sampling time.

Distribution in Turkey: This species has been recorded from Bingöl (Esen and Erman 2013) and Kemaliye (Erzincan) Provinces (Esen et al. 2013).

3. Limnesidae Thor, 1900

3.1. *Limnesia walteri* Migot, 1926

Only a female of *Limnesia walteri* Migot, 1926 was identified from the Tuzla Stream ($39^{\circ}29'991''N$,

$26^{\circ}19'989''E$, 101 m. Alt.) nearby the ancient city of Assos, while 20 (14 φ 16 δ) specimens were identified at the Kulfal Village ($39^{\circ}31'590''N$, $26^{\circ}17'231''E$, 74 m. Alt.) where several headwaters were available feeding the stream.

Distribution in Turkey: This species has been recorded from Elazığ (Erman and Özkan 1997; Erman and Özkan 2000, Erman et al. 2006), Köprüçay Creek (Antalya) (Boyacı et al. 2012a), Bingöl (Esen and Erman 2013).

4. Hygrobatidae Koch, 1842

4.1. *Hygrobates longiporus* Thor, 1898

9 specimens (3 φ ve 6 δ) described from the Tuzla Stream close to Ayvacık District ($39^{\circ}35'246''N$, $26^{\circ}25'109''E$, 240 m Alt.).

Distribution in Turkey: Rize Province (Pešić et al., 2007); Erzurum and Konya Provinces (Erman et al. 2008), Afyon Province, Sandıklı and Akdağ Streams (Erman et al. 2010), Bingöl (Esen and Erman 2013).

4.2. *Hygrobates nigromaculatus* Lebert, 1879

16 specimens (12 φ ve 4 δ) of this species were identified from Tuzla Stream at several locations; $39^{\circ}29'991''N$, $26^{\circ}19'989''E$, 101 m Alt., $39^{\circ}31'590''N$, $26^{\circ}17'231''E$, 74 m Alt. and $39^{\circ}55'813''N$, $26^{\circ}15'915''E$, 7 m Alt.

Distribution in Turkey: Afyon Province (Aşçı et al. 2006-2007); Erzurum Province (Boyacı and Özkan 2007); Elazığ, Erzurum and Malatya Provinces (Erman et al. 2008), Köprüçay Creek (Antalya) (Boyacı et al. 2012a) and Bingöl Province (Esen and Erman 2013).

4.3. *Hygrobates longipalpis* Hermann, 1804

9 specimens (7 φ and 2 δ) of this species were described from Tuzla Stream, close to ancient city of Assos ($39^{\circ}29'991''N$, $26^{\circ}19'989''E$, 101 m Alt.).

Distribution in Turkey: This species has been cited from continental waters of Erzurum Province (Özkan 1982; Boyacı and Özkan 2007; Erman et al. 2008); Kayseri Province (Özkan et al. 1996); Afyon Province (Aşçı et al. 2006-2007) and Bingöl (Esen and Erman 2013).

4.4. *Atractides robustus* (Sokolow, 1940)

7 specimens (4 φ and 3 δ) of this species were determined in Ayazma Creek ($39^{\circ}44'41.87''N$ and $26^{\circ}50'33.80''E$, 500 m Alt.), a higher branch of the Karamenderes Stream. The Ayazma Creek is located on the northern slopes of the Kaz Dağı (Mountain), close to headwaters and flows are clear year round. There was no aquatic vegetation observed at the sampling time, but the creek's bank was surrounded by a variety of broad-leaved trees such as chestnut (*Castanea sativa*), common hazel (*Corylus avellana*), oriental plane (*Platanus orientalis*) and Oriental Beech (*Fagus orientalis*) providing a shaded habitat.

Distribution in Turkey: This species has been reported from Antalya and Mersin Provinces (Smit 1995); Erzurum and Malatya Provinces (Pescic and Erman 2006); Rize and Trabzon Provinces (Pešić et al. 2007), Bingöl (Esen and Erman 2013), Kemaliye District (Erzincan) (Esen et al. 2013).

4.5. *Atractides nodipalpis* Thor, 1899

3 individuals (1♀ and 2♂) were found at the Ayazma Creek.

Distribution in Turkey: This species has been cited from freshwaters of Erzurum Province (Özkan 1982; Boyacı and Özkan 2007; Erman et al. 2010); Kayseri Province (Özkan et al. 1996); Elazığ Province (Erman and Özkan 2000; Erman et al. 2006); Malatya Province (Pesic and Erman 2006); Afyon Province (Aşçı et al. 2006-2007), Köprüçay Creek (Antalya Province) (Boyacı et al. 2012a), Bingöl (Esen and Erman 2013) and Kemaliye Province (Erzincan) (Esen et al. 2013).

4.6. *Atractides longirostris* (Walter, 1925)

Only one female specimen of this species was determined from Tuzla Stream, close to Ayvacık District ($39^{\circ}35'246''N$, $26^{\circ}25'109''E$, 240 m Alt.).

Distribution in Turkey: This species has been reported from Antalya Province (Gülle et al. 2010) and Bingöl Province (Esen and Erman 2013).

5. Mideopsidae Thor, 1928

5.1. *Mideopsis crassipes* Soar, 1907

Only one female specimen of this species is determined from Tuzla Stream, nearby Kulfal Village ($39^{\circ}31'590''N$, $26^{\circ}17'231''E$, 74 m Alt.).

Distribution in Turkey: This species has been reported from Konya Province (Boyacı and Özkan 2000-2001), Köprüçay Creek (Antalya Province) (Boyacı et al. 2012a).

6. Torrenticolidae Piersig, 1902

6.1. *Torrenticola barsica* (Szalay, 1933)

2 specimens of both sexes for this species were determined at the Kocabas Creek nearby Yenice District ($39^{\circ}93'861''N$, $27^{\circ}23'224''E$, 266 m Alt.).

Distribution in Turkey: This species has been recorded from continental waters of Rize (Turan and Pešić 2004; Turan and Pešić 2005; Pešić et al. 2007) and Artvin Provinces (Pešić et al. 2007) as well as Bingöl (Esen and Erman 2013), Kemaliye (Erzincan) District (Esen et al. 2013).

Conclusion

In this study, water mites collected from freshwaters of Çanakkale Province between 2008 and 2009, are listed and compared with the Turkish checklist of water mite fauna by Erman et al. (2010). Consequently, the eleven species assigned to six families are representing first records for Çanakkale Province and the Marmara Region. The preliminary data revealed in this study will be employed for regional fauna inventory by governmental institutions.
