

Research article/Araştırma makalesi

New species and new hybrid of genus *Verbascum* L. (*Verbascum mecit-vuralii* Karavel. *Verbascum x ersin-yücelii* Karavel.) from Turkey

Faik Ahmet KARAVELİOĞULLARI *

Hakkari University, Yüksekova Vocational School, Sümbül Street, Hakkari, Turkey

Abstract

Verbascum mecit-vuralii Karavel. sp. nov. is described firstly for science world from Turkey. The diagnostic morphological characters of the these new species and the closely related other species *Verbascum oreophilum* and *V. pyramidatum* are discussed. Moreover, distribution maps of two new species and the related species of it are given. New hybrids of *Verbascum* (Scrophulariaceae) are described. *Verbascum x ersin-yücelii* Karavel. nothosp. nova (=*V. heterobarbatum* Hub.-Mor. x *V. caudatum* Freyn & Bornm.) from ANK Herbarium.

Key words: *Verbascum*, Trabzon, Ankara, hybrid, Turkey

----- * -----

Türkiye'den *Verbascum* L. cinsinden yeni tür ve hibrit. (*Verbascum mecit-vuralii* Karavel. *Verbascum x ersin-yücelii* Karavel.)

Özet

Türkiye'den bilim dünyası için *Verbascum mecit-vuralii* Karavel. sp. nov. tanımlanmıştır. Ayırıcı morfolojik karakterler yakın türlerle *Verbascum oreophilum* ve *V. pyramidatum* tartışılmıştır. Ayrıca yayılış haritaları yakın türlerle birlikte verilmiştir. *Verbascum x ersin-yücelii* Karavel. nothosp. nova (=*V. heterobarbatum* Hub.-Mor. x *V. caudatum* Freyn & Bornm.) yeni hibrit olarak ANK herbaryumundan tanımlanmıştır.

Anahtar kelimeler: *Verbascum*, Trabzon, Ankara, Hibrit, Turkey

1. Introduction

Verbascum Linnaeus (1753: 177) (Scrophulariaceae) includes about 360 species in the world (Mabberley, 2008). In Turkey, with the additional 130 hybrids, the genus is represented by 246 species, 6 imperfectly known or doubtful records (Huber-Morath, 1978, Davis et al., 1988, Karavelioğulları, 2012, 2014a, 2014b). The endemism ratio of the genus is very high with 196 endemic species (80%) (Karavelioğulları, 2012, 2014a, 2014b).

Verbascum is divided into two sections (Murbeck 1933): *Aulacospermae* Murbeck (1933: 593) and *Bothrospermae* (Murbeck, 1933: 82). The most important difference between these is the seed morphology. In sect. *Aulacospermae*, the seeds are longitudinal corrugated, while in sect. *Bothrospermae* the seeds are transversal corrugated alveolate. All Turkish species of *Verbascum*, belong to sect. *Bothrosperma* (Murberck, 1933; Huber-Morath, 1971).

The first revision of Turkish *Verbascum* for Flora of Turkey was carried out by Huber-Morath (1978). Fourteen species and six hybrids were later described and three new records have been identified (Karavelioğulları, 2009, 2012, 2014a, 2014b).

2. Materials and methods

Then, during the field research studies to Trabzon province in 2009 (within the TÜBİTAK 106T510 project) an unusual population of *Verbascum* was established. At the first glance, it seemed to be close to *Verbascum*

oreophilum ve *V. pyramidatum* were observed. They are formally described here. All specimens were cross-checked with the keys provided by Huber-Morath (1978) and the *Verbascum* accounts given in various relevant literatures such as Fedchenko (1955), as well as all specimens of this new species have been cross checked with the material kept at various herbaria BRNU!, GB!, B!, LE!, KW!, E (Photo!), GAZI!, EGE!, ISTF!, ISTE!, HUB!, ANK!, VANF!, KNYA! (Holmgren et al., 1990) (Table 1). The abbreviations of the authors of plant names were checked from Brummitt and Powell (1992) and <http://www.ipni.org/index.html>. Also, the threat category assessment of the new species was made according to IUCN criteria (IUCN, 2013). During works in ANK Herbarium new hybrid were observed. This is formally described here. *Verbascum x ersin-yücelii* Karavel. (=*V. heterobarbatum* Hub.-Mor. x *V. caudatum* Freyn & Bornm.). New hybrids are mentioned both Murbeck's monography (1933) and Huber-Morath's works (1971, 1978).

3. Results and discussion

Verbascum mecit-vuralii Karavel. sp. nov.—Figures 1 and 2.—Vural sığırkuşusu

Type: Turkey, A8 Trabzon: Hamsiköy, 650–700 m, 15 June 2009, FAK 3875. (Holotype: ANK, Isotype: GAZI).

Description: Biennial, 60–100 cm, with densely stellate, short stalked glands throughout. Basal leaves 10–50 x 5–30 cm, lanceolate-oblong, semicordate, crenate, acute; with petiole 5–15 cm. Stem branched at base. Cauline leaves 5–10 x 3–6 cm, lanceolate semicordate, crenate acute. Inflorescence panicle. Bracts 30–45 x 4–10 mm, ovate to linear-lanceolate, cordate, entire, acuminate. Pedicels 10–20 mm, ebracteolate. Calyx 3–6 mm, almost divided to the base, lobes oblong-lanceolate, acute. Corolla 15–30 mm diam, yellow, lobes 5–10 mm, with pellucid glands, stellate and glandular hairy outside. Stamens 4, 7–9 mm. Filaments 6–7 mm, with mixed whitish-yellow and purplish-violet woolly, two anterior filaments glabrous near apex. Anthers 1–2 mm, reniform. Ovary 1–2 x 0.5–1 mm, ovate. Style 6–7 mm, filiform. Stigma 2 mm, capitate. Capsule 4–6 x 2–5 mm, ovate.

3.1. Phenology

Flowering from June to early July. Capsules ripening from the beginning of August.

3.2. Examined specimens

Verbascum oreophilum K. Koch var. *oreophilum*

Verbascum x ersin-yucelii Karavel. **nothosp. nova** (=*V. heterobarbatum* Hub.-Mor. x *V. caudatum* Freyn & Bornm.)—Figures 1.—Yücel siğirkuyruğu.

Type: Turkey, A4 Ankara: Kalecik, nr. Çukur Köy, Kılıç 1975 (Holotype ANK).

Description: Biennial herb, c. 90 cm tall, similar in habit to *V. heterobarbatum*, indumentum greynish floccose-tomentose. Stem terete, branched. Basal leaves oblong-lanceolate (as in *V. caudatum*) greynish, sparsely hairy above, floccose-tomentose beneath of *V. heterobarbatum*. Upper cauline leaves cordate-ovate to ovate, resembling the form and size of leaves of *V. heterobarbatum*. Inflorescence with flowers not so 2–4 (as in *V. caudatum*). Bracteols 2. Pedicels 1–2 mm. Calyx floccose-tomentose, interspersed with microglands. Corolla 25–35 mm, without pellucide glands, pubescent outside. Stamens 5, 3 posterior filaments with whitish-yellow wool, two anthers anthers decurrent, thereof with a line of purple-violet hairy (as in *V. heterobarbatum*). Ripe capsules not developed, ovate, tomentose.

3. 3. Examined specimens

Verbascum heterobarbatum

Type: [Turkey B4] Ankara: d. Çankaya. Wegrand 9 km südlich Gölbaşı, 870 m, 1 june 1956, Huber-Morath 14075 (holo. Hb. Hub.-Mor.); A4 Ankara: Kalecik, nr Çukur Köy, Kılıç 1975: 141; B4 Ankara: Beynam, D. 13005 (ANK).

Verbascum caudatum

Type: [Turkey B5 Kayseri/Yozgat] Cappadocia, ad vias inter et Caesaream (Kayseri) et Yasd (Yozgat), inter pagos Köprüzköy et Keller, 1300 m, 23 June 1890, Bornmüller 2181 (holotype BRNU, isotype B); A4 Ankara: Ankara airport, A. & T. Baytop (ISTE 15211); B4 Ankara: Ankara to Bala, Beynam forest, Akman 1969: 446 (ANK); B5 Yozgat: 17 km S. W. of Yozgat, 1070 m, Hub.-Mor. 12946; Kayseri: Hımmetdede between Kayseri and Kirşehir, 1170 m, Hub.-Mor. 14771; B6 Kayseri: Sultanhane, 65 km S. of Şarkışla, 1210 m, Hub.-Mor. 11818; Malatya: Darende, 13 June

1906, G. & B. Post (ANK); B7 Malatya: 3 km E. of Malatya, 920 m, Hub.-Mor. 8838; Elaziğ: Charput (Harput), nr Apaud, Sint. 1889: 801; C5 Niğde: Niğde, 1300 m, Krause 2656 (ANK).

The hybrid plants grow together with their parent and their occurrence is limited by the distribution of the endemic *V. heterobarbatum* to the Central Anatolia part of the A4 square.

3.4. Red list assessment

Known only from type locality. The extent of occurrence was nearly as 10 km². There new species are distributed in a single location. *V. mecit-vuralii* grows on rocky place. Its' habitat continues to decline due to agricultural activities and other local uses (criteria B1ab (iii) under CR). The threat category of *V. mecit-vuralii* is suggested as CR [B1ab (iii)].

3.5. Etymology

This is one of the new species is named in honour of the Turkish Legend Botanist Prof. D. Mecit Vural. Hybrid is named in honour of the Turkish Ecologist Prof. Ersin Yücel.

Acknowledgements

The authors thank to Curators of Herbaria, GAZI, EGE, ISTF, HUB, ANK, VANF, KNYA, who allowed them to study their *Verbascum* specimens, to Karel Sutorý for sending of some papers, to BRNU, GB, B, LE, KW, E (Photo), GAZI, EGE, ISTF, ISTE, HUB, ANK, VANF and KNYA herbaria for sending some photos and specimens of the type specimens. I also thank to TÜBİTAK (Project Number: TBAG-HD/54-105T271), for the support.
