1 Bursa Uludag University, School of Medicine, Department of Pediatrics

The first edition of the book "ALGORITHMS FROM SYMPTOMS TO DIAGNOSIS IN CHILDREN" attracted great interest despite all adverse conditions such as the pandemic, and the "EXTENDED AND UPDATED 2<sup>nd</sup> EDITION" was published immediately (since our preparations started when the first edition was published). Six of the 146 topics in the first edition were completely changed, 38 new and interesting topics were added in addition to the 146 topics in the first edition, bringing the total number of pages from 640 to 828. Our book is the most comprehensive, practical, up-to-date and useful "algorithm" book on this subject in Turkey. It accelerates and facilitates diagnosis in disease of children.

This book, which was created with the contributions of 161 authors from Turkey, Germany, USA and Canada, contains the most up-to-date information. For this reason, it is one of the books that every clinician dealing with children should have at hand. We are proud to present the "EXPANDED AND UPDATED 2<sup>nd</sup> EDITION" of our book, which we are sure will be very useful to the entire medical community, especially to medical students, family physicians, pediatric residents, pediatricians and pediatric fellows.
