A Note on a Samarian Coin Type. A Royal Horseman?

Jarosław BODZEK

Some new, unlisted types of Samarian coins have appeared recently on the antiquities market. They significantly increase the repertoire of monetary types used in the region.

Thanks to this, the expansion of the iconography of the Samarian coinage allows for a better understanding of its ideological message. One of the coins seems to be of special interest because of its iconography.

Samaria, 375-330 BCE (Fig. 1.)
AR, obol / ma’eh,
0.77g; 0.9mm; iii
Gorgoneion en face / Horseman with spear r.
Lit: Roma Numismatics Ltd, Auction XXII, 7 October 2021, lot 521.

The coin appeared on the market in 2021. It is interesting for two reasons. As the auctioneer rightly pointed out, the coin belongs to a type not listed in the basic catalogs of Samarian coins. It represents an unknown combination of the obverse and reverse types. The reverse type is not recorded at all. The obverse shows the head of a Gorgon, and the reverse an image of a rider attacking with a spear or a javelin. As an analogy for the obverse type, the auctioneer claims the reverse picture of the coin No 17 in the classic Y. Meshorer and Sh. Qedar catalog (hereafter M&Q 1999). It should be emphasized, however, that in fact M&Q no. 17 represents a different type of female head, designated by the authors of the catalog as “Head of Arethusa” and known from other Samarian coins. Even if it is considered to be the head of a Gorgon, it still represents a different type of it. The new coin’s obverse definitely shows a “Classical” Gorgon’s head, characterized by distinctive features such as forehead curls, an open mouth and a protruding tongue. A much closer analogy in this case are the images of the Gorgon head on unpublished Samarian obols and hemiobols known from the market and on the reverse of hemiobols listed in the M&Q 1999 catalog under number 46. The latter image is described as “Grotesque head facing”, but a better-preserved exemplar known from the antiquities market confirms its identification as a Gorgon head.

The analogy indicated by the auctioneer for the reverse is even less accurate. He cites here the reverse picture of another Samarian issue struck in the name of certain BDYḤB (Bedyehibel) and

included in the *Sunrise* collection catalog under no 138.⁴ The image shows indeed a person on horseback clad in Iranian riding attire (Fig. 3). However, according to my classification of the images of the Iranian horsemen on coins, the Sunrise 138 coin represents the Type H3, that is, the rider holding an upright sword or short scepter.⁵ The image on the newly published coin is closer to the H2 type.⁶ The latter type depicts an Iranian rider in an attacking pose with a spear in his raised right hand (Fig. 4-6). This type is known from three Samarian issues.⁷ Among them, the coin M&Q no 197 is particularly important, because it is most likely a prototype for the others. It imitates itself the well-known “Great King / Iranian horseman” issue.⁸ The prototypes were probably minted in Caria over a quite long period of time and circulated widely in the western provinces of the Achaemenid realm.⁹ In addition, the type of rider attacking with the spear appears in the case of two more Samarian issues.¹⁰ The horseman’s attitude, i.e. the position of the hand holding the spear, is somewhat different in these cases. Moreover, the rider is here just an element of more complex combat (no 123; Fig. 8) and hunting (no 124, Fig 7) scenes probably inspired by prototypes from the glyptics.¹¹

It should be stressed, that in the case of the discussed new coin, the image of the rider differs from the others known from Samarian coins. Generally, the features characterizing the image of the type H2 of the Iranian rider are: a stretched out, sometimes flying gallop of the horse, “Iranian” cavalry attire of the horseman consisting of tiara / kyrbasia, *sarapis* and *anaxyrides*, and his relatively stiff pose, with one arm raised with the spear, the other holding the reins, straight leg and slightly tilted backwards torso.¹² The steed usually has a saddle-cloth, and a braided tail as well as mane. These elements are visible in the case of almost all the above-mentioned Samarian issues. The image of the rider on the new coin does not quite follow this pattern. The reverse of the coin is worn, so some details are not clearly visible. However, there do seem to be noticed some differences in compare to the common “Iranian horseman” type. First, the headgear and the details of the rider’s head and face appear to be significantly different. Coin wear makes it hard to be sure, but it looks like the rider is wearing a tall cylindrical crown, which is possibly a *kidaris*.¹³ His long hair fall down his neck in the form of an ostrich feather. He also seems to have a long beard. All these features taken together are characteristic for the “Great King like figures” well known from royal darics and sigloi, satrapal and other Achaemenid coins, including some Samarian issues.¹⁴ Less can be said about the rider’s attire. Due to the wear and tear of the coin, it is difficult to decide if the rider wears the so-called “Persian robe”, typical for the “Great King like

person”, or just the *sarapis* and *anaxyrides* typical for the “Iranian” horsemen’s attire. The rider’s stance also does not match most other pictures of “Iranian” horsemen on Samarian coins. His leg is bent at the knee, not straightened as in the case of M&Q no. 40, 125 and 197. The closest parallel among the depictions on Samarian coins is the rider on the reverse of M&Q no. 123. Here, too, the leg is bent at the knee at an angle of 90 degrees. On the other hand, the horse on the new coin is shown in a conventional way, i.e. in a flying canter, probably in a saddle-cloth, with a braided tail and a mane. The steed has a strong build and large head and probably belongs to the Nisean breed. On the basis of the observations, it can be concluded that on the reverse of the coin there is a “Great King like figure” and not a so-called “satrap”. In a sense, this has already been noticed by the auctioneer, who in the reverse description marked the term “satrap” with a question mark.

As for coins, the only analogy for such a “Great King like figure” on horseback can be found among Philistian or using more precise term Philistian styled coins. On the obverse of a Philistian didrachm/half-ṣqln there is an image of a horseman wearing *kidaris* and probably the so-called Persian robe (Fig. 2, details are not clear), holding a spear with an apple-shaped rest. It is also not clear whether the rider is holding a spear in his left hand, as Gitler and Tal suggest. According to E.S.G. Robinson, the rider wears kandys, what is unconvincing to me. The same author stated that the horse “appears to have elaborate head-trappings with a strip of stuff hanging from it between his forelegs(?).” The unique didrachm was part of the Delta Hoard (IGCH 1650) and was published first by Robinson, who timidly associated it with the mint of Hierapolis-Bambye. However, Gitler and Tal attribute it to Philistia, and more precisely to Philistian styled coins. In the case, the outfit and weapons suggest associations with the figure of the Great King, what was correctly noted by Robinson and also by Gitler and Tal.

The image of the “royal” rider on the Philistian and Samarian coins differ in style and details. One represents characteristic Philistian stylistic solutions, while the other, in turn, is close to the style of the other Samarian issues. Nevertheless, both of them testify to the very rare use of the motif of a “Great King like figure” on horseback in the coinages of the Achaemenid period. Common images of the Iranian horseman wearing a “flat” tiara, i.e. the so-called “satrap”, on coins, which have numerous analogies in other categories of items, refer to the ideology of the Achaemenid aristocracy and belong to the repertoire of satrapal coinage. As is testified by the Philistian and the new Samarian coins, this repertoire also includes equestrian images of the “Great King like person”. Interestingly, both mentioned coins were minted in the Levant, which may indicate the special importance of the image of the royal horseman in the area. It is all the more important since it is difficult to identify a prototype for such an image not only in coinage but also among other categories of objects. We have only one and very early image of the Achaemenid king on horseback.

attacking with spear enemies. This is the picture representing Kurash the king of Anshan on a seal dated to ca 600 - 580 BCE.23 Here, however, the king seems to wear the ordinary tiara, as in case of “Iranian horsemen” depicted on the coins mentioned above. Perhaps royal figures are depicted also in the scene of lion hunt on the scabbard gold sheath from Oxus Treasure dated to the 5th or 4th centuries BCE.24 Here the headdress resembles the kidaris. Anyway, such images (The Great King on horseback) are rather seldom. On the other hand, the association of the Great King with horse and horsemanship abilities is well attested in the sources.25 Especially in the famous inscription of Naqsh-e Rostam, Dariusz I boasts of his riding skills: “As a horseman, I am a good horseman. As a bowman, I am a good bowman both afoot and on horseback. As a spearman I am a good spearman both afoot and on horseback”.26 The horseman abilities were thus connected with royalty. The discussed Samarian and Philistian coins enrich the repertoire of images of “the Great king like person” on horseback.

The enrichment could have had complex causes and could be interpreted in many ways.27 One way or another, it testifies to a strong Achaemenid influence on the local visual language.

Some new, unlisted types of Samarian coins have appeared recently on the antiquities market. In the present paper, I would like to discuss some points concerning one of them, which is especially interesting because of its iconography. The coin appeared on the market in Autumn 2021. Its reverse shows an image of a cavalryman with a spear or a javelin. Unlike the other images of the Iranian cavalrymen depicted on Samarian coins, the exemplar probably shows “the Great King like figure” having long beard and wearing a kidaris. So far, such an image is not only unique in Samarian coinage, but finds only one analogy in the coinages of the Achaemenid period in general. The image of “the Great King like figure” on horseback is, on the one hand, an interesting extension of the iconographic repertoire of Samarian coins, and on the other hand, it complements my earlier findings concerning the images of the Iranian horseman on Samarian, but also broadly speaking, on satrapal coins.

Keywords: Samaria, coinage, Iranian horseman, Royal Horseman, Achaemenid period.
