LETTER TO THE EDITOR

Gene expressions and mutation analysis in schizophrenia

Şizofrenide gen ifadeleri ve mutasyon analizleri

To the Editor;

We read with interest the article titled “CYB mtDNA mutations and the expression status of genes in the PI3K/AKT/mTOR signaling pathway in patients with schizophrenia” published in Cukurova Medical Journal by Dirican et al1.

In this study, CYB mtDNA mutation frequency and PIK3CA, AKTI, mTORmRNA expression levels were found to be higher in schizophrenia patients compared to healthy individuals. Currently, gene association with many diseases are known and thus new treatments are development2,3.

When the demographic characteristics of the study were examined, 52.27% of the schizophrenia patients were smokers. Smoking disrupts the mitochondrial DNA structure and gene secretion4. We think that it would be appropriate to mention this in the discussion part of this study.

Author Contributions: Concept/Design: SK; Data acquisition: HGB, AZ; Data analysis and interpretation: -; Drafting manuscript: -; Critical revision of manuscript: -; Final approval and accountability: SK, HGB, AZ; Technical or material support: -; Supervision: -; Securing funding (if available): n/a.

Ethical Approval: Ethical approval is not required because this is a comment.

Peer-review: Editorial review. reviewed.

Conflict of Interest: Authors declared no conflict of interest.

Financial Disclosure: Authors declared no financial support.
