pisces

### Abstract

The collection of marine species consisted of 9 taxa (Porifera, Cnidaria, Mollusca, Arthropoda, Brachiopoda, Bryozoa, Spiculida, Echinodermata, and Chordata) including 334 marine species deposited in the Museum.

## Introduction

The Gökçeada Marine Museum predicated on Istanbul University Faculty of Fisheries, Gökçeada Marine Research Department. The collection was started by Dr. Tuncer ULUTÜRK in 1971. The first materials of the collection were obtained by R/V Görür at Gökçeada Fisheries and Sponge-Fishing Research Department (former name of Gökçeada Marine Research Department) where sea sponges were cultivated under uncontrolled conditions. After a while, because of indifferences, some portion of the collection was lost. Whereupon the department restructure in 2007. And then, we resume assembling marine species collection to form the basis of a museum collection. Meriç *et al.* (2007) published first the museum catalogue of the fish specimens in Turkey. The important collection included only specimens of marine and freshwater fishes.

The goal of this study is to declare the marine species collections at the Istanbul University Gökçeada Marine Museum (IUGMM).

## Information on the collection

The specimens of collection come from numerous scientific voyages on the northern Aegean and northeastern Mediterranean Seas. Also, many fishermen have contributed to the museum. Most of the specimens were gathered from studies carried out between 2007 and 2016. Materials were collected by dredge, baited trap, long-line, set net, bottom trawl and scuba diving around the Gökçeada Island. The nomenclature of the higher taxa for Artropoda species and the other groups follows Martin and Davis (2001) and WoRMS (2017), respectively.

The collection represents 334 marine species, 116 fish, 97 crustaceans, 70 molluscs, 12 cnidaria, 24 echinoderms, 9 sponges, 4 tunicate, besides a sea turtle and dolphin (Fig. 1-2) (Table 1).

In the collections, *Thunnus thynnus*, *Mobula mobular*, *Sphyrna zygaena*, *Xiphias gladius* and *Tetrapturus belone* have only their head not body (Fig 2). Eleven species caught below 1000 m depth in the northern Aegean Sea. In additions forty one species come from some scientific surveys on the Northern Aegean Sea between 1971 and 1980.

*Ranzania laevis*, *Lobotes surinamensis*, *Sphyrna zygaena* and *Brama brama* are very rear in the Mediterranean basin (Froese and Pauly, 2017). In additions, *Polyprion americanus*, *Lepidion lepidion*, *Hexanchus griseus* and *Mora moro* are very rear in Aegean basin (Papaconstantinou, 2014; Bilecenoğlu *et al.* 2014). Among the species presented in the museum, *Pyrosoma atlanticum*, *Paragalene longicrura*, *Odontozona minoica* and *Monodaeus guinotae* are first record for Turkish waters.

The IUGMM is a public, non-profit, educational, regionally oriented museum dedicated to the collection, preservation, research, marine information of Gökçeada island. Even though the museum is open throughout the year, the number of visitors is increasing in summer by 150-200 per week.

The collection has joined Istanbul University's Management Practice and Research Center for Cultural Heritage Areas (MUZEYUM). We keep working to register the collection as a Special Museum.
