## ABSTRACT

The article explains how the Black Holes operate. The Earth satellites show that our Earth is cleft, and our science cannot explain why. The scenario of what happened to the Earth is described in the Hindu Vedas. According to the Vedas, the Earth was swallowed by the Black Hole of the old Sagittarius Dwarf Galaxy, when it was drifting through our Solar system on its way to the center of our galaxy. Once sucked in, the Earth was span around, a big chunk of its crust was melted, but the Earth survived the encounter by going to the center of the Black Hole where the temperature is the lowest, and it was spit out. The Black Holes are holes scooped with rotational movement in the Space Matrix nonlinear electromagnetic field (NEMF). Two types of Black Holes must have been created.

## 1. Introduction

In my article (Kuman, 2019), "The Power of Mind to See the Invisible", I explained that we can see intuitively with our subconscious Mind. Russian scientists demonstrated that Bronnikov with blindfolded eyes (and no signal running from the eyes to the brain) was still able to see and was seeing the object tri-dimensional (holographic). He could even see the object when it was behind a screen. Since only nonlinear fields can pass through a screen, this means that nonlinear field is involved in the intuitive seeing with the Mind. Seeing with the Mind allowed me to see and explain the hyperbolic shape of the Black Holes before the first photo of a Black Hole was published. I was also able to intuitively see and explain the spinning of the Black Holes before the first photo of a Black Hole in polarized light was taken, which made the spinning of the Black Hole visible (Kuman, 2019).

My lifetime studies of the aura found that: 1/ the aura is weak nonlinear electromagnetic field (NEMF) and 2/ the aura is emotional - it shines brighter at positive emotions and it is

dimmer at negative emotions) (Kuman, 2020a). Since we say we are "in high Spirit" when we experience positive emotions (and our aura is brighter) and we say we are "in low Spirit" when we experience negative emotions (and our aura is dimmer), I concluded that the aura must be our Spirit. Then I found that the ancient Jewish Cabala was teaching to high priests that the aura is our Spirit – aura (Spirit). Since I found that the weak aura (Spirit) NEMF rules and regulates everything in the body, not with its strength but with the information it carries, a question arises: How were the auras (Spirits) NEMF created?

## 2. Black Holes 1 Creating Auras (Spirits)

The Russian scientist Shkatov patented equipment that allowed him to measure the spinning of the aura. He found that at positive emotions the aura spans clockwise (Kuman, 2020a; Kuman, 2021). Since I know that the aura is nonlinear EMF (NEMF), nonlinear physics apply, which teaches that vortices spin clockwise and sucks energy. Therefore, the clockwise-spinning aura sucked from somewhere NEMF

energy, to become brighter. For this to happen, there must be reservoir of NEMF energy from which the aura (Spirit) can suck energy at positive emotions. I call this reservoir of NEMF energy Space Matrix NEMF, and this is the Space Matrix, from which the Universe was created (Kuman, 2020b).

Since nonlinear fields do not dissipate and can imprint information, NEMF will be the perfect material to create a Universe. So, the Creator created a space of NEMF (Space Matrix) and imprinted on it the holographic tri-dimensional image (information) of the Universe to be and the Universe was created (Kuman, 2020b). First, with scooping rotational movement spinning Black Holes were created. Thus, the Black Holes are spinning holes in the material of the Space Matrix NEMF. Finally, the name Black Hole is justified, because our present believe that the Space Matrix is vacuum doesn't allow us to speak about Black Holes because we cannot have holes in vacuum.

### 3. Was the Spiritual World Created First?

The Hindu's Rig Veda says that the Spiritual World was created first (the Spirits were created first) and the Material World was the last to be created (Ghosh, 2008). As we develop as civilization, we are finding more and more evidence that what is written in the Vedas is right. Why? It is because the Vedas are the knowledge ("veda" means "knowledge") and the wisdom of the civilization from before Noah's Flood (and I have the historical prove of it) (Kuman, 2014; Kuman, 2018).

Also, Veda's statement that the Spirits were created first makes full sense to me because the Material World is not all the way material. All living being (humans, animals, and plants) inhabiting the material world are symbiosis of two halves - material body and Spirit – and each half benefits from the presence of the other half. The Spirit in a material body can enjoy food and sex, and the material body can experience emotions through the emotional Spirit, be intuitively creative, response fast, adapt fast, and evolve fast.

How was the Spiritual World created? Probably, Black Holes of type 1 (BH1) created the Spirits of the Spiritual World first, while Black Holes of type 2 (BH2) created the material world. All people, who were in a state of clinical death and came back (including my grandfather Kuman), tell the same story. After their Spirits left the body, they hovered over the body for 3 days and 3 nights, and then left and traveled along a long dark tunnel - probably the Black Hole type 1 (BH1) that created the Spirits.

### 4. The Creator Is Unusual Light Saturated with Love. Is This Why Our Spirits Crave Love?

My grandfather said that there was light at the end of the long dark tunnel and when his Spirit arrived there, he understood that the light was not the light we see with our eyes. It was a different type of light, and it was light saturated with Love (Kuman, 2021). He felt very loved by the shining Big Love, and was ready to join the Big Love, when an angel rushed toward him shouting: Wait it is not yet your turn, you need to go back! And the Spirit of my grandfather went back to his material body.

### 5. How Were the Emotional Spirits Created?

According to the Rig Veda (Ghosh, 2008), the creation of the Universe (from the Space Matrix) started with the creation of the Spirits of the Spiritual World, which make sense because the Spirits (just like the Space Matrix) are field form of matter. The creation of Spirits started with the creation of spinning Black Holes of type 1 (BH1) through rotational scooping in the Space Matrix NEMF. By imprinting on the scooped Space Matrix NEMF the vibrational frequencies of emotions, the Spirits of the Spiritual World were created, which were emotional.

The amazing thing here is that the Spirits' NEMF (with imprinted emotional frequencies) can still breathe in at positive emotions the Space Matrix NEMF, which is pure NEMF. Probably, the breathed in NEMF energy from the Space Matrix NEMF gets the specific imprinted emotional frequencies of the Spirit from contact with the frequency-specific emotional Spirit.

### 6. How Was the Material World Created?

Later Black Holes of type 2 (BH2) were rotationally scooped in the Space Matrix NEMF, which created the material world by imprinting on the Space Matrix NEMF the vibrational frequencies of the material world. This made the whole material world a material half and wave NEMF half, which explains why the particles sometimes behave like particles, sometimes like waves. These are the two faces of the same coin – it is called dualism wave – particle (Kuman, 2021).

The Black Holes 2 in the Space Matrix NEMF (BH2) created the material world by imprinting on the scooped-out Space Matrix NEMF the specific frequency of each material. However, since the material world was populated with living beings, who are symbiosis of material bodies (created by BH2) and emotional Spirits NEMF (created by BH1) (Kuman, 2021), the Spiritual World must have been created first, as the Rig Veda is telling us (Ghosh, 2008).

### 7. The Black Holes in Action - What Black Holes Can Do?

Thus, the Black Holes are spinning, and they are spinning anti-matter because the material NEMF of the Space Matrix has been scooped out. The highest temperature in a Black Hole will be at the walls of the Black Hole, where the matter NEMF of the Space Matrix rubs on the spinning anti-matter of the Black Hole, which creates extreme heat. Moving to the center of the Black Hole, as the angular velocity decreases, the temperature of the Black Hole decreases, reaching lowest temperature at the Center of the Black Hole.

#### 7.1. Why Is Our Earth Not a Sphere?

The satellites of our Earth say that the Earth is not a sphere – it is cleft. Our science doesn't know why the Earth is cleft, but I found explanation of it in the ancient Hindu Vedas. The ancient Rig Vedas say that our Earth is cleft because it was sucked into the Black Hole of the smaller Sagittarius Dwarf Galaxy, which our galaxy had swollen in the past. When this smaller galaxy was drifting through our Solar system on its way to the center of our galaxy, the Earth got sucked by the Black Hole of this galaxy. Our telescopes can still see the Black Hole of this smaller Sagittarius Dwarf Galaxy with the

left-over old stars (that barely shine) orbiting around the center of our galaxy (Kuman, 2015).

The Hindu Vedas say that when our Earth got sucked into the Black Hole of the Sagittarius Dwarf Galaxy, it swiftly spans around the hot wall of the Black Hole, which melted part of its crust. The pressure from the swift spinning caused seismic and volcanic activity resulting in the pop out of a new land called Scandinavia (“Scanda” means “Popped Out” in Sanskrit). If our Earth survived the swallowing by the Black Hole of the Sagittarius Dwarf Galaxy, it was because it swiftly moved to the center of the Black Hole, where the temperature is the lowest, and it was spit out (Kuman, 2021).

### 7.2. Why Do Our Continents Fit as Pieces of One Puzzle?

The left-over crust of the Earth was called “Asa”, which means “old” in Sanskrit (from here came the name Asia). The spinning of the Earth made the big continent of Asa to crack into two big pieces and the two pieces sled away from each other on the liquid magma. Asa split into American Continent and Euro-Asian Continent. For that reason, the shorelines of the West European Continent and the East American Continent fit as pieces of one puzzle (Kuman, 2015).

### 7.3. Why Do All Stars in the Milky Way Wobble?

We can still see in our telescopes the Black Hole of the old Sagittarius Galaxy with the left-over stars orbiting around the center of our Galaxy. I think the presence in our galaxy of the old Sagittarius Dwarf Galaxy (which our galaxy has swallowed in the past) seriously disturbs all the stars in the Milky Way. Observations found that the axes of spinning of all stars in the Milky Way wobble (in synchrony). I think the orbiting of the heavy Black Hole of the old Sagittarius Dwarf Galaxy around the heavy Black Hole of our galaxy is what makes the axis of spinning of all stars in our galaxy (including our Sun) to wobble. It is called cycle of precession and the time of making full orbit is 25,720 years (according to latest data) (Kuman, 2015).

### 7.4. Why the Planet Mars Didn't Originally Belong to Our Solar System?

The Hindu Rig Veda (Ghosh, 2008) says that: 1/ the Earth gave birth to 7 planets and the moon was one of them. 2/ The Planet Mars did not originally belong to our Solar System - it was sucked into our Solar System during conjunction of the planets from the old Sagittarius Dwarf Galaxy when the last was drifting through our Solar System on its way to the center of our galaxy. This was confirmed by contemporary studies,

which showed that the ratio of oxygen isotopes is the same on Earth and on the Moon, but it is different on Mars - conclusions were not drawn, it was reported as a curious fact (Kuman, 2020c).

Also, the fact that Mars is the only red planet in our solar system should tell us that Mars has different origin. The fact that Mars is the only planet without liquid core and magnetic field should tell us that Mars is an old planet, which probably originally belonged to the old Sagittarius Dwarf Galaxy. As the ancient Vedas said (Ghosh, 2008), it was probably sucked into our Solar system during conjunction of the planets from the old Sagittarius Dwarf Galaxy when the last was merging through our Solar System on its way to the center of our galaxy.

## 8. Conclusion

It seems that first the Space Matrix NEMF was created. Then the first type of Black Holes (BH1) was scooped out with rotational movement from the Space Matrix NEMF, which created the Spirits of the Spiritual World by imprinting on the scooped Space Matrix NEMF the emotional vibrations of the Spirit. Then a second type of Black Holes (BH2) were scooped out with rotational movement, which created the material world, by imprinting on the scooped NEMF material the specific frequencies of each material. The fact that the material world is populated by living beings (humans, animals, and plants), who are symbiosis of material bodies and spirits, means that the Spirits must have been created first, as the Rig Veda is telling us.
