The Implementation of School Based Management: School Committee Involvement in Islamic Schools *

Arum FATAYAN 1, Ivan HANAFI 2, Eliana SARI 3, Abd. Rahman A GHANI 4

Abstract

Education management functions are not much different from general management functions. Islamic school themselves present in the world of education in Indonesia are motivated by the desire of the people to apply equally between the science of religion and general science. The progress of Islamic junior high schools in Indonesia is inseparable from committee involvement in the implementation of School-Based Management. The school community itself is from internal Islamic School, namely educators and education staff as well as the Islamic school community from external, namely the school committee consisting of parents of students and also local residents.

Keywords: School committee, school-based management, Islamic junior high schools

1. INTRODUCTION

Since the implementation of the School-Based Management (SBM) program in Indonesia, which was precisely in 2006 along with the changes in the school curriculum, has resulted in a centralized system change by the government to become a centralized system in each Islamic school which ultimately requires many elements to help manage the Islamic school including schools elements, have greater autonomy and responsibility in using resources to solve problems and conduct good and effective educational activities, for the development of schools in a short time (Ming-Cheung & Cheong-Cheng, 1997) the autonomy system needs the involvement of school members in managing the School. The findings of previous research in Indonesia show how delegation of power and authority to school level is credited with creating partnerships in participatory school decision making such as building school missions, annual programs, school textbooks, sharing visions, school budgets, school buildings, school-based curricula, and even student discipline policy (Bandur, 2012). Islamic junior high schools in the capital city of Indonesia, namely Jakarta, has been considered successful in conducting a SBM program. The success was considered from the involvement of the school community, because the school managers and Islamic school residents were more aware of the weaknesses and strengths of the school. Islamic School management tasks are arranged according to the characteristics and needs of the school if it is itself and therefore members of the school (including the school supervisory board, supervisors, principals, teachers, parents and students, etc.). Schools
have greater autonomy and responsibility in using resources to solve problems and carry out good and effective educational activities, for the development of schools in a short time (Kemal, Suryadi, & Rosyidi, 2019; Rahim, Utsha, Bhuiyan, & Miah, 2019; Ming-Cheung & Cheong-Cheng, 1997). SBM as a way of increasing community participation, SBM as an approach to increase partnerships in schools, and SBM as a reform package that improve teaching-learning environments student achievement (Bandur, 2012).

SBM can be interpreted as a management model that provides autonomy flexibility to schools, directly encourage the participation of school members and the community, improve school quality based on government policies and regulations. The high level of involvement and support of parents is a part of the success of SBM because without support and parental support it will not work well and effectively, collaborative learning planning is also a very influential aspect because students are more focused on interests and talents, and school autonomy in accordance with existing school conditions and developing aspects of school excellence create effective school management (Kemal, Suryadi, & Rosyidi, 2019; Golarz & Raymond, 2002). From the number of Islamic junior high Schools both private and public in Jakarta which amounted to 120, as well as from the Ministry of Religion data which explained that Islamic junior high Schools that officially carried out SBM programs in Jakarta were 35 Islamic junior high schools and 31 of 35 Madrasah Tsanawiyah. The Ministry of Education ranks very well or “A”. A program that is proclaimed will not run smoothly and succeed optimally if there are no various supporting factors available. Supporting factors can come from both internal and external (Nurkholis, 2005). One of the factors seen from the success of SBM is its impact school-based programs that involve members of the entire school community: principals, teachers, staff, parents, and community members (Bandur, 2012). SBM can provide indispensable conditions such as autonomy and flexibility in making decisions and using resources and strong commitment of members and active role in facilitating education to face challenges. From the external environment (Cheng & Mok, 2007), external means Islamic junior high Schools citizens who are active and play a role in each Islamic School program.

Where teachers, principals, parents, and community members collectively serve as decision makers. Authentic site-based management has been cited as a vehicle for creating communities of inquiry where leaders with vision and educational professionals, in partnerships with community people, re-examine and reform their practices and ideas about education (Henkin, Cistone, Dee, & Dee, 2010) that according to him teachers, principals, parents, and community members collectively act as decision makers, because in the SBM system, those who have schools are those who are in the school environment, not just the Principal or the teacher, people The old school or committee has an important role in all policies carried out by the School. This research takes the formulation of a problem namely How is the school committee's involvement in implementing SBM implemented in the private Madrasah Tsanawiyah district of Pesanggrahan, South Jakarta, Indonesia?

2. METHOD

This research used in this study is field research and Multi site case studies or comparative studies; because the things studied are something that is in the field and directly. This field research is qualitative in the form of research whose results produce descriptive data in the form of written or oral words from each of the people and actors observed (Lexy-Meleong, 2000). Multi-studies site a qualitative research approach that we designed to gain the in-depth knowledge of an organizational phenomenon that has barely been researched: strategic scanning (Bogdan & Biklen, 1998). The definition of a multi-site study design is a qualitative research design involving several sites and research subjects. The subjects of the study are interpreted to have the same characteristics. Multi-site studies are one form of qualitative research that can indeed be used primarily to develop theories that are raised from several similar research backgrounds, so as to produce theories that can be transferred
to broader situations and more general coverage. The data collection technique in this study used a qualitative method of capturing data from three of the best Madrasah Tsanawiyah in Jakarta, namely Islamic junior high Schools Darunnajah, Islamic junior high Schools Annajah and Islamic junior high Schools Al-Musyarrifah.

The procedure in collecting data in this study uses three data collection techniques, namely observation, intervention and documentation. Event data and daily behavior are examined with interview and observation techniques (direct observation in the field). The subjects of this study are people who know or become perpetrators of an educational activity. They are expected to be able to provide complete information about Madrasah citizen involvement in School-based management implementation at Islamic junior high School Al-Musyarrofah, Islamic junior high School Annajah and Islamic junior high School Darunnajah Jakarta. After a preliminary study, the parties determined to be the subjects of the study consisted of key informants and ordinary informants.

Analysis of the data used in this study is descriptive qualitative analysis, namely by describing and interpreting data from each component indicator from the results of interviews, document review and field observations. So research data that has been obtained by researchers from the results of observations, study documents and also in-depth interviews of respondents. In the research techniques used and the right data collection tools (appropriate) can help achieve results (problem solving) that are valid and reliable. Data analysis techniques used with descriptive analysis during data collection and after the data is collected are developing field notes and interviews to be conducted, collecting and categorizing data according to their classification, entering data into the format of analysis, developing questions to collect further data, collecting and coding chronologically according to the time of collection, reviewing the data and grouping it into one category format and classifying the data according to the code, describing the data that has been analyzed with the focus of each study and the final conclusion drawing.

Analysis of data collection using qualitative analysis techniques of Miles and Huberman which consists of three stages, namely data collection as well as reduction (data collection and reduction), presenting data (display data), and drawing conclusions (conclusion drawing / verification) as in the following picture:

3. FINDINGS

School is a social institution that cannot be separated from the community, or conversely the community cannot be separated from the school. The relationship of Islamic private junior high schools in South Jakarta from the three sites that I examined illustrates that schools with communities and committees are forms of external communication based on shared responsibility and goals. The principal's orientation towards the committee and the community is aimed at maintaining the survival of the school, improving the quality of education, expediting teaching and learning activities and obtaining assistance and support from the community in the context of developing and implementing
school programs. There is a partnership that is established consistently between the school and the
community and the committee in particular.

The involvement of school residents in implementing SBM is an inseparable part. The ideas,
input and support from all even the school’s residents become very real and unavoidable needs. One of
the school residents who is quite important is the school committee which has a strategic role in
empowering and managing the school. of the 60 school committees I interviewed and 40 school
members namely the principal, teachers and foundations, as well as six months’ observations at
the school that I researched and also provided with accurate data, then I can say the school and committee
members have four roles in the implementation of school-based management, namely as an advisory
agency, supporting agency, controlling agency, and role to bridge the interests of the school. In
addition to the school committee, the most important thing is the teaching and education staff as well
as the foundation because they are the principals who implement SBM directly. With the condition of
the committee directly involved in SBM, it is seen that it will revive all existing programs in madrasas,
according to the scientific journal entitled Exploring predictors of the impact of school-based
management in rural Mexico: Do student engagement, teacher attitudes and parent involvement
predict better academic outcomes? " which concludes that the effectiveness of school members such as
parents, teachers, education staff and even students can turn on all programs and extracurricular
activities at school (Mejia & Filus, 2018). In his journal that uses the methodology of a random
experiment, explaining that even though the implementation of SBM in Mexico does not affect
students' academic grades, the activity of school residents has an impact on more active school
programs. The activeness of the program that the researchers found in the field of implementing SBM
had a similarity in the journal.

Residents around the school as well as community leaders have an important role in school
activities, therefore they are always involved in school activities. In school work meetings conducted
before the new school year to formulate annual activities then junior high school. Darunnajah, junior
high school Annajah and junior high school. Almusyarrofah always involves community leaders who
aim to make the community aware of what programs are in the school and can provide input for school
programs. From the background of research conducted by researchers in leading private tsanawiyah
schools in the Pesanggrahan sub-district of South Jakarta in Indonesia, it was very visible the
involvement of school residents in all school programs that impacted on the effectiveness of all school
programs.

4. DISCUSSION and CONCLUSION

The involvement of Islamic junior high School residents in implementing School-based
management is a part that cannot be separated. The ideas, input and support of all Madrasa citizens are
very real and unavoidable needs. One of the important residents of Islamic junior high School is one of
them is the Islamic junior high School committee which has a strategic role in empowering and
managing Islamic junior high School in four roles, namely advisory agency, supporting agency,
controlling role about school programs (controlling agency), and the role to bridge Islamic junior high
School interests. In addition to the Madrasah Committee, the most important thing is also educators
and education as well as foundations because they are the perpetrators who implement school-based
management directly. Residents around Madrasahs and community leaders have an important role in
Islamic junior high School activities; therefore they are always involved in Islamic junior high School
activities. In the Madrasah work meeting held before the new school year to form annual activities, it
always involves community leaders who aim to make the community aware of what programs are in
Islamic junior high School and can provide input for Islamic junior high School programs. From the
background of the research that the researchers did at the flagship Society of Islamic Education in
Jakarta Indonesia, Islamic junior high School citizens were very involved in all Islamic junior high
School programs which affected the effectiveness of all Islamic junior high School programs. it is in accordance with research Alan B. Henklin said that where teachers, principals, parents, and community members collectively serve as decision makers. Authentic site-based management has been cited as a vehicle for creating communities of inquiry where leaders with vision and educational professionals, in partnerships with community people, re-examine and reform their practices and ideas about education (Henkin et al., 2010). that is, according to him teachers, principals, parents or committees, and community members collectively act as decision makers, because in the SBM system, those who have schools are those who are in the school environment, not only the principal or teachers, parents or committees. Schools also have an important role in terms of all policies undertaken by the School.

Acknowledgment

Thank you to the Head of the Education Office of the Ministry of Religion of the DKI Jakarta Province and the Principal of Islamic junior high School for granting research permission. In addition, it is also addressed to LPDP which has provided financial assistance for further studies and research funding.
