The Open Journal of Nano is strongly supported by a dedicated international editorial board consisting of renowned scientists. We need to ensure the highest quality standards of the journal and provide prompt, detailed, rigorous assessments that allow rapid editorial decisions and result in significantly improved manuscripts. Also we wish for the editorial board members' further support, by providing the editors with advice and suggestions and by submitting some of the best work of their own laboratory/activity.

The journal aims to publish mini papers at the forefront of nanoscale science and technology and especially those of an interdisciplinary nature. **Mini articles** which are very short papers (no longer than 4 pages) containing useful data, descriptions or other information that are too limited to carry a full research article.

Mini articles may consist of a single, but well-described piece of information, such as:

- data and/or a plot plus a description,
- description of a new method or instrumentation,
- negative results,
- concept or design study.

Microarticles are very short papers (no longer than 2 pages) containing useful data, descriptions or other information that are too limited to carry a full research article.

To be publishable in this journal, papers must meet the scientific quality standards, contain significant and original new science. Mini articles should be self-contained, provide the scientific context of the described work and consist of the following elements: a title, list of authors (plus affiliations), abstract, keywords, a main text and at least 4 references.

Towards ensuring high editorial standards, every article submission is preliminarily assessed by the editors of the journal before being sent to independent referees.
