Ahmet Ural

Here we are with the fourth issue of Mucosa. With this issue, Mucosa chronologically completed its first year with growing interests and motivating feedbacks from all researchers studying in different basic and clinical disciplines related all mucosal tissues.

Our main goal is to establish and keep a high level of standards for scientific publishing, and we maintain a meticulous approach to fulfill its requirements. We thank you all for your kind and stimulating feedbacks along this way.

In this issue, Mucosa features five scientific papers. Arzu Kilic and Ulku Mete Ural review the updates on clinical manifestations of anogenital warts and treatment strategies. In the original article section, Aslan and Koksal evaluate the oropharyngeal infections in febrile neutropenia in a large patient group, and Gunes et al. analyze the benign and premalign lesions in the oral cavity. You will also find two remarkable cases in this issue of Mucosa; Aydogdu et al. present a successful dental intervention for a radicular cyst in a hereditary angioedema patient, and Habibullah Aktas draws attention to nicotine stomatitis in a heavy smoker man for the differential diagnosis of oral mucosal lesions.

We would like to thank our authors, reviewers, and readers for their meritorious contributions. We also respectfully understand and thank our former co-editor Ahmet Ural for his contribution to date, he is going to leave us for his special reasons with this issue.

At the end of 2019, Mucosa is going to be a candidate to be covered in precious indexes. We invite you to submit your excellent papers for publication in Mucosa.

With warmest regards,
