Dear colleagues,

We are very pleased to welcome you to the first issue of Mucosa in 2020. This is chronologically the first issue of our third year in publishing. With growing interests and encouraging feedbacks from all our authors, reviewers, and readers, Mucosa is going to be a candidate to be covered in precious indexes, starting TR Index and ESCI in 2020.

In this issue, Mucosa involves five scientific papers including three original articles, a review, and a case report. Buruk and Ozlu review and update a very hot topic of these days: “New Coronavirus: SARS-CoV-2”, the cause of the pandemic which the world encounters with. In the original article section, Camyar et al. evaluate the attack localizations in C1 inhibitor deficient hereditary angioedema patients, and present some clinically valuable unpublished findings before. Aksan et al. present demographic and clinical characteristics of patients with Behçet’s disease in Giresun. Additionally, Guven et al. assess the characteristics of peptic ulcer disease in children and its relevance with *H.pylori* infection. By a demonstrative case, Akbulut et al. present a child with a diagnosis of ulcerative colitis and pyoderma gangrenosum.

We hope you benefit from these articles. We would like to thank our readers, authors, reviewers as well as our publisher for their meritorious contributions.

We await your valuable contributions for our forthcoming issues of Mucosa.

Kind regards,

*Savas Yayli*

*Murat Cakir*
