Dear Colleagues,

Nowadays, getting used to living with the fact of Covid 19 pandemic, everyone of us tries to keep up with the increasing knowledge of Covid 19 and its effect on every aspect of life and medical disciplines. Not surprisingly, it has affected much of our practice. In this issue you will find two original studies reporting on the effect of Covid 19 pandemic on patient demographics and applications to tertiary and secondary public hospitals. The quarantine measures seem to have an important effect on patient applications and causes.

Another article in this issue reports the results of early pars plana vitrectomy for acute post operative endophthalmitis, which is a devastating complication and a treatment challenge for every ophthalmologist. You will also find an interesting case of intraorbital wooden foreign body in this issue.

Best regards,
