Dear Colleagues,

We are delighted to inform that the extended and updated 2nd edition of "ALGORITHMS FROM SYMPTOMS TO DIAGNOSIS IN CHILDREN" has been published with the great contributions of Prof Dr Ergün Çil, Assoc Prof Dr Fahrettin Uysal, Assoc Prof Dr Erdal Eren and Prof Dr Özlem Mehtap Bostan as editors. We recommend this book to every physician dealing with pediatric diseases.

In this issue, you will find two interesting case reports. One is about a rare ocular infestation of dirofilariasis. The other case report describes bilateral CMV retinitis in a patient receiving immunosuppressive therapy for grade 4 diffuse large cell non-Hodgkin lymphoma.

Also in this issue, you may read an original article about traumatic giant tear associated retinal detachment and the outcome of the repair.

Have a nice autumn. I wish you a pleasant, efficient academic year.

Assoc Prof Berna Akova
