Dear colleagues,

We are looking forward to new year with more academic enthusiasm as we plan to widen the scope of the journal and expect your contributions. In this issue, we have a letter to the editor. It is a practical letter about the tips for the repair of eyelid lacerations. It includes informative illustrations by Dr. Kıvanç. We also have an original article reporting the anatomical and functional outcomes of scleral buckling for a considerable number of rhegmatogenous retinal detachment surgeries. Finally we have a case report for globe saving techniques. A case with recalcitrant corneal ulcer and lagophthalmos in his right eye underwent therapeutic keratoplasty and repair of eyelid with post auricular skin graft.

Best wishes

Dr Akova
