Editorial Policies

ISRES Publishing follows the steps below in the proceedings book publishing process.

In the first stage, the papers sent to the conferences organized by ISRES are subject to editorial oversight. In the second stage, the papers that pass the first step are reviewed by at least two international field experts in the conference committee in terms of suitability for the content and subject area. In the third stage, it is reviewed by at least one member of the organizing committee for the suitability of references. In the fourth step, the language editor reviews the language for clarity.

Review Process

Abstracts and full-text reports uploaded to the conference system undergo a review procedure. Authors will be notified of the application results in three weeks. Submitted abstracts will be evaluated on the basis of abstracts/proposals. The conference system allows you to submit the full text if your abstract is accepted. Please upload the abstract of your article to the conference system and wait for the results of the evaluation. If your abstract is accepted, you can upload your full text. Your full text will then be sent to at least two reviewers for review.

The conference has a double-blind peer-review process.

Any paper submitted for the conference is reviewed by at least two international reviewers with expertise in the relevant subject area. Based on the reviewers' comments, papers are accepted, rejected or accepted with revision. If the comments are not addressed well in the improved paper, then the paper is sent back to the authors to make further revisions. The accepted papers are formatted by the conference for publication in the proceedings.

Aims & Scope

In the 21st century, great changes are occurring in the management, economics and business in the world. During and after the covid-19 pandemic, new economic models, supply chains and monetary systems have been discussed. Traditionally, it is seen that change and transformation in the field of management, economics and business takes a little more time compared to fields such as health, technology and engineering. However, this situation seems to have started to change with the Covid-19 epidemic disease. It is expected that changes will occur in management, economics and business during and after the Covid 19 epidemic disease. For this reason, this conference focused on the changes and innovations in the field of management, economy and business that started with Covid 19. However, the organizing committee also recognizes the value of traditional knowledge in the management, economy and business. For this reason, the conference is also open to traditional studies in the field of management, economics and business.

The aim of the conference is to bring together researchers, business executives and administrators from different countries, and to discuss theoretical and practical issues in management, economics and business. At the same time, it is aimed to enable the conference participants to share the changes and developments in the field of management, economics and business with their colleagues.
