#### ABSTRACT

---

The list of the vascular plants specimens of Tohma valley (Malatya-Sivas) was given in this study. 1816 plant specimens were collected from the research area between 2007-2015 years. At the end of the identification of the collected specimens and the results of previous studies, 81 families, 353 genera, 847 species, 18 sub-species, 6 varieties and 871 taxa in total were determined. The largest 3 families are Asteraceae (102 species), Brassicaceae (78 species) and Fabaceae (77 species). The largest 4 genera are *Astragalus* (31 species), *Alyssum* (17 species), *Onosma* (14 species) and *Salvia* (14 species). The phytogeographical spectrum of the species is as follows: Irano-Turanian elements 298 (35.18%), Mediterranean elements 39 (4.60%) and Euro-Siberian elements 27 (3.18%) and multi-regional or phytogeographical unknown 483 (57.02%). The number of endemic species in the research area was determined as 169 (20%). At the same time, new IUCN categories of twelve taxa were proposed.

Bu çalışmada Tohma vadisi (Malatya-Sivas) damarlı bitkilerin listesi verilmiştir. 2007-2015 yılları arasında çalışma alanından 1816 bitki örneği toplanmıştır. Toplanan örneklerin ve daha önceki çalışma sonuçlarının değerlendirilmesi sonucunda 81 familya, 353 cins, 847 tür, 18 alttür 6 varyete ve toplamda 871 takson tespit edilmiştir. En büyük üç familya Asteraceae (102 tür), Brassicaceae (78 tür) ve Fabaceae (77 tür)'dır. En büyük 4 cins *Astragalus* (31 tür), *Alyssum* (17 tür), *Onosma* (14 tür) ve *Salvia* (14 tür) dir. Fitocoğrafik bölgelere göre türlerin dağılımı; Iran-Turan elementi 298 (%35.18), Akdeniz elementi 39 (%4.60), Avrupa-Sibirya elementi 27 (%3.18) ve çok bölgeli ya da fitocoğrafik bölgesi bilinmeyen 483 (%57.02)'dir. Çalışma alanındaki endemik tür sayısı 169 (%20) olarak belirlenmiştir. Aynı zamanda 12 takson için yeni IUCN kategorileri önerilmiştir.

## INTRODUCTION

**S**tudies on "Turkey's Important Plant Areas" have been dated back to the early 1990s. The results of the work of 40 scientists from about 20 universities in Turkey were determined 122 important plant areas [1]. Tohma valley is one of the Important Plant Areas. Therewithal, there are two naturel protected area in the Tohma valley. These areas are Günpinar Waterfall and Somuncubaba Canyon which was declared for naturel protected area with the 19813 numbered of official newspaper in 1988 [2]. For this reason, the area has gained importance in the study of vascular plant biodiversity.

Tohma valley is located between Incesu village (Gürün district of Sivas) and Balaban village (Darende district of Malatya provinces). The area is situated at latitude 38°-35° N and longitude 37°-36° E. The study area is located in the Iran-Turanian phytogeographic region. This area is situated in the B6 square according to Davis' grid system [3]. The altitude of the study area varies from 920-1980 m.

Tohma Valley, starting from Sivas territory into two branches, forms a wide groove to Malatya. The rocks in the valley are formed by the overlapping of the plate-shaped. There are limestone rocks with a height of 300-350 meters on both sides of the valley. The most important feature of the area is of gypsum and the limestone hills.

The climatic characteristics of the area were estimated according to the data from Balaban, Darende, and Gürün meteorological stations. Drought index of Emberger ( $S = PE/M$ ) is 0.94 [4] and Mediterranean climate is seen in the study area.

## MATERIALS and METHODS

The materials of this study are 1816 vascular plant specimens that were collected from Tohma Valley between the 2007 and 2015. At least one sample for each taxon is deposited at INU herbarium.

Specimens were identified basically using the Flora of Turkey [3,5,6], Flora Europaea [7] and description of the new species [8-10]. Identified

species, records in the studied area from Flora of Turkey [3,5,6] and other studies [11,12] used in the writing of the floristic list. In the floristic list, the following details are stated: family, genus, species (cultivated plants are indicated an asterisk), authors (abbreviations follow Brummitt and Powell [13]), Turkish name of taxa in quotation marks (according to Güner et al. [14]) locality number, collector(s), collector number, phytogeographical region, endemism and IUCN risk categories [15,16].

Collecting localities in the study area are as follows: (1) Malatya: Darende, Balaban village, 920 m; (2) Malatya: Darende, 3. km from Balaban village to Darende, 930 m; (3) Malatya: Darende, between Yeşiltaş-Balaban village, 950 m; (4) Malatya: Darende, Karaoguz village, 920 m; (5) Malatya: Darende, Yenice village, 960 m; (6) Malatya: Darende, Akçatoprak village 920 m; (7) Malatya: Darende, Akova village, 930 m; (8) Malatya: Darende, Irmaklı village, 920 m; (9) Malatya: Darende, 2. km from Irmaklı village, 950 m; (10) Malatya: Darende, opposite slopes of Irmaklı village, 1400-1800 m; (11) Malatya: Darende, Karşıyaka village 950 m; (12) Malatya: Darende district, 1050 m, 950 m; (13) Malatya: Darende, Günpinar waterfall, 1350 m; (14) Malatya: Darende, between Günpinar waterfall-Fatmaderviş village, 1300 m; (15) Malatya: Darende, Gedikağzı village 1100 m; (16) Malatya: Darende, 2. km from Darende to Gürün, 1300 m; (17) Malatya: Darende, 8. km from Darende to Gürün, 1300 m; (18) Malatya: Darende, 12. km from Darende to Gürün district, step, 1350 m; (19) Malatya: Darende, Çukurkaya village, 1000-1200 m; (20) Sivas: Gürün, Yazıköy village, 1200 m; (21) Sivas: Gürün, Ağaçlı village, 1200-1400 m; (22) Sivas: Gürün, Bahçeçi village, 1300 m; (23) Sivas: Gürün, 3. km from Gökpınar lake, 1750 m; (24) Sivas: Gürün, opposite the slopes of Gökpınar lake, 1800 m; (25) Sivas: Gürün, Suçatı village, 1450 m; (26) Sivas: Gürün district, 1400 m; (27) Sivas: Gürün 1. km from Gürün to Sularbaşı village 1500 m; (28) Sivas: Gürün, Tepecik village, 1650 m; (29) Sivas: Gürün, Kavak village, 1800 m; (30) Sivas: Gürün, between Gürün-Incesu village, 1650 m; (31) Sivas: Gürün, Şuğul valley, 1650 m, (32) Sivas: Gürün, İncesu village, Reşadiye town, 1700 m; (33) Sivas: Gürün, 1. km from Yaylacık village, 1750 m.

The abbreviations used in the text and the floristic list are as follows: Ir.-Tur.: IranoTuranian; Medit.: Mediterranean; E.Medit.: East Mediterranean; Eur.-Sib.: Euro-Siberian; End.: Endemic; CR: Critically EN: Endangered; VU: Vulnerable; LR: Lower risk; ŞK: Şükrü Karakuş; INU: İnönü University Department of Biology Herbarium in Malatya.

Also in this studies, we have applied the IUCN criteria for the threaten categories of species [14]. Threaten categories of some species are firstly determined.

## RESULTS and DISCUSSION

At the end of identification of 1816 vascular plant specimens, collected in this study and evaluated previous studies were determined in 81 families, 353 genera, 847 species, 18 subspecies, 6 varieties and total 871 taxa. Five species are non-flowering vascular plants. Seven species belong to Gymnospermae, while the other 835 were Angiospermae. Dicotyledones and Monocotyledones are consisted of 721 and 114 species respectively.

The richest families in terms of number of species are Asteraceae (102 species), Brassicaceae (78 species), Fabaceae (77 species), Poaceae (58 species) and Lamiaceae (56 species). The largest genera are *Astragalus* (31 species), *Alyssum* (17 species), *Onosma* (14 species), *Salvia* (14 species) and *Silene* (13 species). Largest family and genus indicated that dominant vegetation type of the study area is steppe.

The species of the study area, categorized according to phytogeographical regions, can be listed as follows: Irano-Turanian elements 298 (35.18%), Mediterranean elements 39 (4.60%) and Euro-Siberian elements 27 (3.18%) and multi-regional or phytogeographical unknown 483 (57.02%). The dominance of the Ir.-Tur. elements would be expected because the study area is in the Ir.-Tur. region.

In the study area, 169 taxa are endemic to Turkey and the ratio of endemism is 20%. Distribution to the threatened category of endemic (169) and nonendemic (9) taxa are as follows; 8 taxa CR, 22 taxa EN; 27 taxa VU, 121 taxa LR.

Threaten category of ***Astragalus darendensis*** "Darende geveni" have not been determined until this studies. In our observations, we determined that extent of occurrence estimated to be less than 10 km<sup>2</sup>, severely fragmented or known to exist at only a single location, decline number of mature individuals and population size estimated to number fewer than 50 mature individuals for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as CR B2ab(v);D.

Threaten category of ***Astragalus malatyensis*** "malatya geveni" is VU in redlist of plant of Turkey [15]. In our observations, we determined that population size estimated to number fewer than 50 mature individuals for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as CR D.

Threaten category of ***Astragalus scabriofilius*** "gövdesiz geven" is EN in redlist of plant of Turkey [15]. In our observations, we determined that extent of occurrence estimated to be less than 100 km<sup>2</sup>, severely fragmented or known to exist at only a single location and decline number of mature individuals for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as CR B1ab(v).

Threaten category of ***Psephellus brevifimbriatus*** "has tülübaş" is CR in redlist of plant of Turkey [15]. In our observations, we determined that extent of occurrence estimated to be less than 100 km<sup>2</sup>, severely fragmented or known to exist at only a single location and decline number of mature individuals for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as CR B1ab(v).

Threaten category of ***Taraxacum rupicolum*** "çıtlığı" have not been determined until this studies. In our observations, we determined that extent of occurrence estimated to be less than 10 km<sup>2</sup>, severely fragmented or known to exist at only a single location and decline number of mature individuals for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as CR B2ab(v).

Eight endemic species are included in CR (critically) threaten categories which they are *Allyssum haussknechtii* Boiss. "maraş kevkesi", *Astragalus darendensis* "Darende geveni", *Astragalus malatyensis* "malatya geveni", *Astragalus scabrifolius* "gövdesiz geven", *Psephellus brevifimbriatus* "has tülübaş", *Taraxacum rupicolum* "çitliğ", *Thymus cappadocicus* "taş kekiği" and *Thymus pallasicus* "boz kekik".

Threaten category of *Erodium aytacii* "bey iğneliği" is suggested as EN by Yıldırımlı and Koca [9]. In our observations, we determined that area of occupancy estimated to be less than 500 km<sup>2</sup>, severely fragmented or known to exist at no more than five locations and decline of number of mature individuals. According to IUCN Red List criteria [16], threaten category of the species is proposed as EN B2ab(v).

Threaten category of *Klasea bornmuelleri* "yitik topbaş" is DD in redlist of plant of Turkey [15]. In our observations, we determined that Population size estimated to number fewer than 2,500 mature individuals and due to road widening works estimated continuing decline of at least 20% within five years or two generations for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as EN C1.

Threaten category of *Minuartia corymbulosa* var. *gypsophiloidea* "kırk tıstıs" is EN in redlist of plant of Turkey [15]. In our observations, we determined that area of occupancy estimated to be less than 500 km<sup>2</sup>, severely fragmented or known to exist at no more than five locations and decline of number of mature individuals. According to IUCN Red List criteria [16], threaten category of the species is proposed as EN B2ab(v).

Threaten category of *Salvia balliana* "gerger şalbası" have not been determined until this studies. In our observations, we determined that area of occupancy estimated to be less than 500 km<sup>2</sup>, severely fragmented or known to exist at no more than five locations and decline of number of mature individuals. According to IUCN Red List criteria [16], threaten category of the species is proposed

as EN B2ab(v).

Twenty one endemic species are included in EN (endangered) threaten categories which they are *Acanthophyllum oppositiflorum* "has takacak", *Aethionema lepidioides* "tere kayagülü", *Arenaria sivasica* "sivas kumotu", *Astragalus stenosemioides* "zirve geveni", *Echinophora la-mondiana* "kaba çördük", *Erodium aytacii* "bey iğneliği", *Erysimum echinellum* "siğilli zarife", *Fumana trisperma* "üç güneşotu", *Gypsophila leucochlaena* "darende çöveni", *Haplophyllum myrtifolium* "murt sedosu", *Hedysarum pycnostachyum* "Fırat batalağı", *Hedysarum rotundifolium* "özge batalak", *Helianthemum germanicopolitanum* "özge güngülü", *Hesperis bicuspidata* "gecemeñekşesi", *Isatis undulata* "etekli civiotu" *Klasea bornmuelleri* "yitik topbaş", *Minuartia corymbulosa* var. *gypsophiloidea* "kırk tıstıs", *Onobrychis stenostachya* subsp. *krausei* "başak korunga", *Onosma bornmuelleri* "Amasya sincarı", *Onosma sorgerae* var. *sorgerae* "nemrut çiçeği" and *Salvia balliana* "gerger şalbaşı".

Threaten category of *Acantholimon strigil-losum* "narın kirpiotu" is VU in redlist of plant of Turkey [15]. In our observations, we determined that area of occupancy estimated to be less than 2,000 km<sup>2</sup>, severely fragmented or known to exist at no more than 10 locations and decline extent of occurrence for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as VU B2ab(i).

Threaten category of *Paronychia cataonica* "gürün etyaramı" is VU in redlist of plant of Turkey [15]. In our observations, we determined that area of occupancy estimated to be less than 2,000 km<sup>2</sup>, severely fragmented or known to exist at no more than 10 locations and decline area of occupancy for this species. According to IUCN Red List criteria [16], threaten category of the species is proposed as VU B2ab(ii).

Threaten category of *Reseda tomentosa* "havlı gerdanlık" is EN in redlist of plant of Turkey [15]. In our observations, we determined that extent of occurrence estimated to be less than 2000 km<sup>2</sup>, severely fragmented or known to exist at no more than 10 locations, decline of number of mature individuals and population size

estimated to number fewer than 1,000 mature individuals. According to IUCN Red List criteria [16], threaten category of the species is proposed as VU B2ab(v);D1.

Nineteen endemic species are included in VU (vulnerable) threaten categories which they are *Acantholimon acerosum* var. *parvifolium* "pişik keveni", *Acantholimon strigillosum* "narın kırçıtu", *Alyssum anatomicum* "ana kuduzotu", *Alyssum bornmuelleri* "seyyah kevkesi", *Astragalus zahlbruckneri* "kubbe geveni", *Bupleurum papillosum* "tüylü şeytanayağı", *Cyclotrichium niveum* "külotu", *Gypsophila pinifolia* "hıskıdim", *Hedysarum aucheri* "altın batalak", *Hesperis syriaca* "arapitırı", *Minuartia rimarum* var. *multiflora* "yer tıstısı", *Onosma argentata* "gümüş emceğek", *Papaver persicum* subsp. *fulvum* "kaşıklık", *Phlomis physocalyx* "küfe çalbası", *Pimpinella flabelliifolia* (Boiss.) "yel anasonu", *Paronychia cataonica* "gürün etyaranı", *Reseda tomentosa* var. *tomentosa* "havlı gerdanlık", *Tanecatum densum* subsp. *sivasicum* "kırk piretu" and *Tchihatchewia isatidea* "alligelin".

Nine nonendemic taxa were evaluated in threaten category by Ekim et al. [15]. One of them is EN category that it is *Scutellaria orientalis* subsp. *cretacea* "kulaklı kaside". Eight of them are VU category that they are *Allium asclepideum* "koç soğanı", *Allium asperiflorum* "beyaz soğan", *Brassica deflexa* "sarkık lahana", *Centaurea cassia* subsp. *cassia* "kelseçebaşı", *Erodium gallicum* "bozkır iğneliği", *Matthiola ovatifolia* "takkeli şebboy", *Onosma decorticans* "göreme emceği" and *Veronica polifolia* "dallı maviş".

Floristic list is given below;

## 1. PTERIDOPHYTA/EĞRELTİ BÖLÜMÜ (4 family/4 genus/5 species)
