Dear Editor

In the Medical Records Journal (2022;4(1):90-4), in our article titled "Assessment of Thyroid Function Tests in Patients with COVID-19 Infection and Their Relationship with Euthyroid Sick Syndrome" the number of patients was mistakenly written once in the material method section as 885. The number of patients who applied and were included between the specified dates is 473. In other parts of the article, it was stated that the study was conducted with 473 patients many times. The error in the number of patients made once in the material-method has been corrected.
