Intoxication occasion occur with the aim of homicide and suicide as well as accidentally. It is important to find out whether the occasion is at the result of homicide, suicide and/or an accident at the death occasions at the result of poisoning as well as the rate of intoxication cases in all death occasions. The reason and the dosage of poisoning at the occasion of poisoning and the specifying of the material causing the poisoning are the area of investigation of the forensic toxicology. In this study, being compared of datas got from it with the other studies carried out the materials used with the aim of poisoning was aimed.

Within this scope, unexpected death, homicide and suicide occasions coming via information centre to Istanbul Police Headquarters, Public Security Branch Office and Homicide Department between the years 2010 and 2014 were analyzed retrospectively. Istanbul is the 23rd most crowded city in the world. Every year, analyzing of average 20-30 thousand occasions is done by crime scene investigation team. One part of these occasions is homicide and suicide and the other part is theft, grab, terrorism and smuggling. 6087 death occasions happened in the first 9 months of 2010 and 2014 were classified as homicide and suicide primarily. Then statistical datas were prepared at poisoning type, dosage and topic of homicide and suicide occasions as being determined the material.
