Kabul (Accepted): 22.10.2016

ABSTRACT: In this study, the aquatic coleoptera species collected from Adiyaman province in 2013-2014 were evaluated. Overall, 46 taxa concerning the superfamily of Hydrophiloidea (Coleoptera: Helophoridae, Hydrochidae and Hydrophilidae) were detected in the area. Within these species, 38 taxa for South-eastern Anatolian region and 43 taxa for Adiyaman province were recorded for the first time.

Keywords: Adiyaman, Helophoridae, Hydrochidae, Hydrophilidae, Turkey.

Adiyaman İli Hydrophiloidea (Coleoptera: Helophoridae, Hydrochidae ve Hydrophilidae) Faunası

ÖZET: Bu çalışmada, 2013-2014 yıllarında Adiyaman İlinden toplanan sucul kınkanatlı türleri değerlendirilmiştir. Araştırma alanında Hydrophiloidea (Coleoptera: Helophoridae, Hydrochidae ve Hydrophilidae) üst familyasına ait 46 taxa tespit edilmiştir. Bu türlerden 38 taxa Güneydoğu Anadolu Bölgesi ve 43 taxa Adiyaman ili için ilk kez kaydedilmiştir.

Anahtar Kelimeler: Adiyaman, Helophoridae, Hydrochidae, Hydrophilidae, Türkiye

INTRODUCTION

Turkey has seven geographical regions (Aegean, Black sea, Central Anatolian, Eastern Anatolian, Marmara, Mediterranean and South-eastern Anatolian

region) and 81 provinces (Anonymous 1, 2016). Adiyaman is a city and located in the South-eastern Anatolian region, Turkey shown in the Figure 1 (Anonymous 2, 2016).

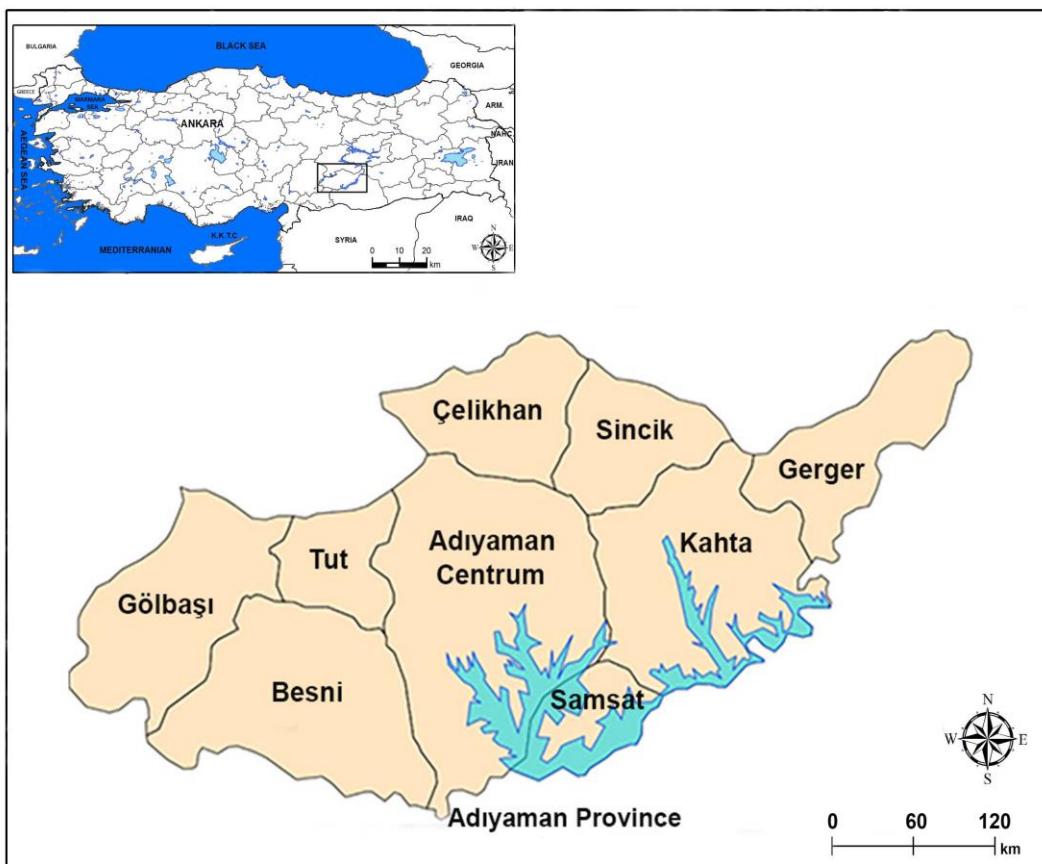

Figure 1. Map of the research area.

It has a semi-corrupted Mediterranean and terrestrial climate and its elevation is 669 meters. It has nine districts named as Adiyaman-centrum, Besni, Çelikhan, Gölbaşı, Gerger, Kahta, Samsat, Sincik, and Tut. All districts have very different geographic structures from each other; for example, Nemrut Mountain has 2150 meters length in Kahta district. On the other side, Centrum, Kahta and Samsat districts have coasts on the Atatürk Dam Lake. There are three lakes (Büyük, Azaplı and İnekli lakes) and many ponds that have very significant biodiversity in Gölbaşı district. Gerger district has big canyons and a dam lake (Anonymous 3, 2016).

Helophoridae family has a single genus: *Helophorus* Fabricius, 1775. This genus includes more than 190 species (Angus, 1984, 1985, 1988, 1992; Smetena, 1985). Approximately 150 species were reported from Palaearctic Region (Angus, 1992; Chiesa, 1959; Hebauer, 1994) and 41 species from Nearctic Region (Smetena, 1985); nevertheless, only 3 Oriental Region originated-species were reported (Angus, 1992; Hansen, 1999). 51 species were recorded concerning six subgenera in Turkey as follows; (*Helophorus* (*Atracthelophorus*), *H.* (*Empleurus*), *H.* (*Eutrichelophorus*), *H.* (*Rhopalhelophorus*), *H.* (s. str.), *H.* (*Transithelophorus*), *H.* (*Trichelophorus*) (Darılmaz and İncekara, 2011; Taşar et al., 2012).

Hydrochidae family has a single genus: *Hydrochus* Leach, 1817 (Hansen, 1987, 1991). This genus includes about 200 species worldwide (Hidalgo-Galiana et al., 2010). 27 species and two subspecies were reported from Palaearctic Region (Hansen, 2004). Seven species were recorded in Turkey: *Hydrochus brevis* (Herbst, 1793), *H. elongatus* (Schaller, 1783), *H. flavigennis* Kuster, 1852, *H. farsicus* Hidalgo-Galiana et al. 2010, *H. ignicollis* Motschulsky, 1860, *H. megaphallus* Berge Henegouwen, 1988, *H. nodulifer* Reitter, 1897 (Darılmaz and İncekara, 2011).

Hydrophilidae is a large family and has four subfamilies like Horelophinae, Horelophopsinae, Hydrophilinae and Sphaeridiinae (Short and Fikacek, 2011; Bayram et al., 2012). This family is also known as water scavenger beetle. It was reported that the species of Hydrophilinae and Sphaeridiinae subfamilies appeared in Palaearctic Region (Hansen, 2004). The Hydrophilidae family has 169 genera and 2835 species all over the world (Short and Fikacek, 2011). 102 species were reported from Turkey (Darılmaz and İncekara, 2011; İncekara et al., 2011; Taşar, 2014; Polat et al., 2015).

There is not any detailed study about Hydrophiloidea (Coleoptera) from Adiyaman province and other provinces of South-eastern Anatolian region, unless stated otherwise. The aim of this study was to present prosperity of species of Hydrophiloidea in Adiyaman province, Turkey. Besides, this study contributes new data for Turkish Hydrophiloidea Fauna.

MATERIALS and METHODS

The specimens were collected from freshwater habitats of Adiyaman province (Turkey) with sieves having 3,15x1 and 3,15x0,5 mm mesh size. The beetles were killed with ethyl acetate and stored in small bottles until identification. Specimens were cleaned with brush before identification. Aedeagophores of collected specimens were dissected under a stereo microscope in the laboratory. The identified species were converted into museum material and deposited in the private collections of the author at Adiyaman University, Turkey.

RESULTS and DISCUSSION

In the current study, 46 species of three families were collected and identified as following: Helophoridae (with 7 species), Hydrochidae (with 2 species) and Hydrophilidae (with 37 species). Locality data of collected specimens were presented in Table 1.

Within these species: *Cercyon laminatus* Sharp, 1873, *Enochrus calabricus* (Ferro, 1986) and *Hydrochus elongatus* (Schaller, 1783) were recorded for the second time from Turkey. 38 species were recorded for the first time from South-eastern Anatolian region. 41 species and two subspecies were reported as new records for Adiyaman province.

Determined species and their locality data are listed below:

Family: Helophoridae

Genus: *Helophorus* Fabricius, 1775

Subgenus: *Eutrichelophorus* Sharp, 1915

Helophorus (E.) *micans* (Faldermann, 1835)

Material examined: A1, 04.06.2013, 5 ex.; A13, 04.06.2013, 4 ex.; A17, 28.04.2014, 2 ex.; A17, 22.05.2014, 2 ex.; A17, 22.05.2014, 1 ex.; A17, 19.06.2014, 2 ex.; A17, 14.07.2014, 2 ex.; A17, 28.08.2014, 1 ex.; A18, 20.09.2013, 6 ex.; A18, 20.09.2013, 3 ex.; A19, 28.04.2014, 2 ex.; A19, 28.04.2014, 1 ex.; A19, 22.05.2014, 2 ex.; A19, 30.05.2014, 2 ex.

Subgenus: *Helophorus* Fabricius, 1775

Helophorus (s. str.) *aquaticus* (Linnaeus, 1758)

Material examined: A11, 20.06.2013, 2 ex.; A10, 04.06.2013, 1 ex.; A38, 28.05.2014, 1 ex.

Helophorus (s. str.) *grandis* (Illiger, 1798)

Material examined: A3, 04.06.2013, 2 ex.; A10, 04.06.2013, 3 ex.; A45, 28.05.2014, 2 ex.; A46, 05.06.2013, 4 ex.; A21, 03.05.2014, 4 ex.; A22, 06.05.2014, 2 ex.; A30, 03.05.2014, 2 ex.; A49, 03.06.2013, 10 ex.; A50, 03.06.2013, 10 ex.

Helophorus (s. str.) *syriacus* Kuwert, 1885

Material examined: A2, 06.06.2013, 4 ex.; A47, 05.06.2013, 4 ex.; A48, 05.06.2013, 2 ex.; A31, 03.06.2013, 2 ex.; A49, 03.06.2013, 5 ex.; A50, 03.06.2013, 5 ex.

Remark: This species is a widespread European species, ranging from southern Scandinavia to North Africa and reaches to Balkans and European Russia in the east (Hansen, 1999). However, this species was firstly reported from Turkey in İzmir province (Sahlberg, 1913), this is the first report from South-eastern Anatolian Region of Turkey.

Subgenus: Paracycreon d'Orchymont, 1942

Cercyon (P.) laminatus Sharp, 1873

Material examined: A11, 20.06.2013, 1 ex.; A17, 24.06.2013, 2 ex.

South-eastern Anatolian region has nine provinces (Adiyaman, Batman, Diyarbakır, Gaziantep, Kilis, Mardin, Siirt, Şanlıurfa and Şırnak). This region was not studied in detail before, only a few reports were published (Angus, 1988, 1992; Gentili, 1988, 1991, 2000).

To the best of our knowledge, there is not any study on the species of Helophoridae and Hydrochidae families in Adiyaman province. Four species (*Enochrus affinis*, *Enochrus coarctatus*, *Laccobius gracilis* and *Laccobius hindukuschi*) of Hydrophilidae family were reported in Adiyaman province before (Darılmaz and İncekara, 2011; Taşar, 2014). Nonetheless, *Laccobius obscuratus orchymonti* Gentili, 1976 and *Sphaeridium scarabaeoides* (Linnaeus, 1758) were reported in Adiyaman province (Darılmaz and İncekara, 2011), none of the specimens of these species was found at the research area in the current study.

It was observed that different varieties of aquatic coleoptera placed in the habitats of the east and west sides of the research area. The most abundant habitats on account of species varieties were determined in the west side of the province having 900 meters altitude at Gölbaşı Lakes and their environment. It was indicated that 36 aquatic coleoptera (*Helophorus micans*, *Helophorus brevipalpis brevipalpis*, *Helophorus daedalus*, *Helophorus hilaris*, *Hydrochus elongatus*, *Hydrochus flavipennis*, *Anacaena globulus*, *Anacaena limbata*, *Anacaena rufipes*, *Paracymus chalceolus*, *Berosus affinis*, *Berosus byzantinus*, *Chasmogenus livornicus*, *Cymbiodyta marginella*, *Enochrus melanocephalus*, *Enochrus bicolor*, *Enochrus halophilus*, *Enochrus ochropterus*, *Enochrus politus*, *Enochrus quadripunctatus*, *Enochrus affinis*, *Helochares lividus*, *Helochares obscurus*, *Hydrobius fuscipes*, *Limnoxenus niger*, *Hydrochara dichroma*, *Brownephilus major*, *Hydrophilus piceus*, *Laccobius bipunctatus*, *Laccobius hindukuschi*, *Laccobius sipylyus*, *Laccobius syriacus*, *Laccobius gracilis*, *Coelostoma orbiculare*, *Cercyon circumcinctus*, *Cercyon laminatus*) species were hosted by this area. The east side of the research area, containing Kahta, Sincik and Gerger districts, have different altitudes about 550-1227 m. It was indicated that the habitats placed in the east side of the research area had 10 more aquatic coleoptera species (*Helophorus aquaticus*, *Helophorus grandis*, *Helophorus syriacus*, *Chaetarthria seminulum*, *Enochrus calabricus*, *Laccobius hauserianus*, *Laccobius obscuratus aegaeus*, *Laccobius sinuatus*, *Laccobius alternus*, *Laccobius quaeitus*) than the west side.

It was reported that Hydrophiloidea superfamily had 153 taxa (Coleoptera: Helophoridae; 49, Hydrochidae; 7 and Hydrophilidae; 97) in Turkey (Darılmaz and İncekara, 2011). After publication of this checklist, 7 more species (*Berosus asiaticus*, *Berosus dentalis*, *Berosus guttalis*, *Enochrus affinis*, *Enochrus calabricus*,

Helophorus occidentalis, *Helophorus yammounensis*) were recorded firstly from Turkey (İncekara et al., 2011; Taşar et al., 2012; Taşar, 2014; Polat et al., 2015). For this reason, the number of the species of Hydrophiloidea superfamily (including Helophoridae, Hydrochidae and Hydrophilidae families) were raised to 160 taxa. In the current study, 46 taxa were identified in the research area as follows: 7 taxa of Helophoridae, 2 taxa of Hydrochidae and 37 taxa of Hydrophilidae families. Consequently, this study presents new distributional data for Turkish Hydrophiloidea fauna. More studies are needed to establish the overall distribution of Turkish Hydrophiloidea fauna.

ACKNOWLEDGEMENTS

This study was supported by Adiyaman University, project numbered: KMYOBAP-2012/0001. Furthermore, it was partially presented in International Ecology 2016 Adnan Aldemir Symposium on 16th -19th May 2016, The Kars Park Hotel/TURKEY.
