

PALEONTOLOGICAL (PLANKTIC FORAMINIFER-OSTRACOD) INVESTIGATION OF EOCENE SEQUENCE OF KARAMAN REGION

Ümit ŞAFAK*

ABSTRACT.- The microfauna of Eocene sequence outcropping around Karaman have been investigated. These planktic foraminifers and ostracods were systematically described; also *Acarinina bullbrooki* planktic foraminifer zone belonging to Lutetian has been determined and this zone was compared with other Eocene planktic foraminifer zones over the world indicating same level. In addition, ostracod species described were stratigraphically and paleogeographically compared with those of other basins.
