

THE STRUCTURAL AND STRATIGRAPHIC POSITION OF DAĞKÜPLÜ (NORTH OF ESKİŞEHİR) OPHIOLITHIC COMPLEX
AND PETROGRAPHY OF CUMULATES

H. Jerf ASUTAY*; Arif KÜÇÜKAYMAN* and M. Ziya GÖZLER**

ABSTRACT.— Dağküplü ophiolitic complex which is situated around Yakakayı-Gündüzler villages to the north of Eskişehir indicates southerly overturned structural position. Mesozoic ophiolitic rocks, from bottom to top present a sequence of ophiolitic melange, mafic and ultramafic cumulates and tectonites. Cumulate sequence begins with gabbros at the bottom passes to the dunite interlayered pyroxenites towards to the top.
