Dear Scientists,

We have left behind the first year of our publishing life with your contributions and efforts. In the early days we were a group of 40 volunteers for JUM. With our publications, we not only contributed to the world of science, but also new friendships. At the end of the year, we became thousands of people with its editor, author, referee and reader. This year, we expect the number of members of our journal team to increase.

26 valuable papers published in the first year of JUM were downloaded by 1200 researchers. This is the result of the valuable work of our authors and the focused examinations of our referees. JUM has reached hundreds of universities and research institutions worldwide. We work hard to reach more universities and researchers.

Our journal is indexed by some indexing databases. Next year, we will get an analysis of our contributions to the world of science.

I would like to thank all my colleagues for their contributions.

In the second year of our publication life, we await endless support from you our valuable researchers and writers.

We wish you a scientific life full of achievements.

Best regards!
