Dear readers,

We are so proud and happy to welcome you to the third issue of Mucosa in 2019. With this 5th issue, Mucosa is continuing its publishing with growing interests from all researchers studying in different basic and clinical disciplines related all mucosal tissues.

In this issue, we present you five articles including a review, an original article, and three case reports from different disciplines. Bilgic et al. summarize the toxicity of glucocorticoids in dermatological diseases especially autoimmune bullous diseases and give more insights about the novel glucocorticoid toxicity index. Frew et al. analyze the clinical applications of quality of life scores in epidermolysis bullosa and find out minimal clinically important difference and clinical bands of “Quality of Life in Epidermolysis Bullosa” questionnaire. In a case report by Bahadir et al, a rare mucosal presentation of Nocardia infection in a child with leukemia is reported. In the last two case reports, authors present their treatment modalities in related mucosal conditions. We hope you benefit from these articles.

We would like to thank the members of our editorial board, reviewers, authors and designers for preparing the third issue of 2019. We look forward to seeing your scientific research articles in our future issues. We will be happy to announce you our expanded indexing areas of our journal in the next issues.

Best wishes,

Savas Yayli
