Dear colleagues,

We are very happy to welcome you to the third issue of Mucosa in 2020. It is a great pleasure for us to going on to publish our new issues during pandemic period.

In this issue there are five scientific papers. Manzak Saka et al. reviewed the psychiatric perspective to oral dysesthesia regarding pathogenesis, associated conditions and the treatment options. In a research letter, Cevik et al. reported their preliminary results about disturbed postprandial lipid metabolism in patients with psoriasis, and they suggested that these results might be associated with the increased risk of cardiovascular disease in psoriasis. In a case series, Bahadir et al. reported the unusual mucosal presentations of non-Hodgkin lymphoma in five children emphasizing importance of systemic evaluation and histopathological examination. In the case report section, we have two demonstrative cases. Uzuncakmak et al. reported a patient with glycogen storage disease type 3 who had a rare lingual muscle involvement with lichenoid infiltration, possibly related with impaired carbohydrate metabolism. Finally, in the last case, Ozturk et al. presented an interesting case of multiple fibrolipomas that diagnosed clinically and histopatologically in a unilateral fashion on the face and oral mucosa.

We would like to thank our readers, authors, reviewers as well as our publisher for their meritorious contributions.

We await your valuable contributions for our forthcoming issues.

Kind regards,

*Savas Yayli*
