Accepted: *X Month 202X*
Available online: *X Month 202X*

Abstract

The manuscript should contain an abstract. The abstract should be self-contained and citation-free and should be maximum 400 words. The abstract should state the purpose, approach, results and conclusions of the work. The author should assume that the reader has some knowledge of the subject but has not read the paper. Thus, the abstract should be intelligible and complete in it-self (no numerical references); it should not cite figures, tables, or sections of the paper. The abstract should be written using third person instead of first person.

1. Section Title

This template contains detailed instructions for preparing manuscripts for our journal. Missing to follow them may cause rejecting of the manuscript without further processing. So, please read both the source and compiled texts.
Insert your text here. Make sure that it is written in correct English. The guides [1, 2], [3–8] may help you with it.
If there are subsections, then you may use

1.1. Subsection title

You may also use subsubsections, but please put a line or two of text between the subsection and the subsubsection titles.
Proclaims (theorems, propositions,...) should be inserted as follows:

Theorem 1.1. *Statement of the theorem.*

Please, do not put a proclaim immediately after a subtitle of any level. Write a line or two of text in between.

Proof. Your proof. Please do not use the quantifiers $\forall, \exists$ as abbreviations, i.e., use them only in the papers from formal logics. The symbol for the end of the proof will appear automatically. □

For displayed equations (formulas) you may use

$$e^{i\pi} = -1 \tag{1.1}$$

and/or similar LaTeX constructions (align(ed), multline, gather(ed),...).

$$\ell_\infty(\Omega) = \left\{x = (x_k) \in \omega : \Omega x \in \ell_\infty\right\}$$
$$c(\Omega) = \{x = (x_k) \in \omega : \Omega x \in c\}$$
$$c_0(\Omega) = \{x = (x_k) \in \omega : \Omega x \in c_0\}$$

That way, you may refer to (1.1) in the subsequent text. We strongly encourage the usage of this dynamic system of referencing instead of explicitly writing, for example, (1.1).

Email addresses: xxxxxxx@xxxx.xxx, xxxxxxx@xxxx.xxx, xxxxxxx@xxxx.xxx
Cite as: F. Author, S. Author, T. Author, *Title of manuscript*, Univers. J. Math. Appl., 8(x) (202x), xx-xx.

If you do not refer to an equation, then you may write it as

$$e^{i\pi} = -1$$

(preferred) or

$$e^{i\pi} = -1$$

In such a starred version the equation will not be numbered. If you want to use a distinctive tag to an equation, you may do that in the following manner:

$$e^{i\pi} = -1 \tag{1.2}$$

So you can refer to (1.2).
Formulas should be displayed *only* if they must be numbered for a subsequent reference or if they are too long or complicated. Please *do not* number displayed formulas that are not referred to.
Send figures/illustrations as eps files (each figure/illustration in a separate file). They can be inserted in the following way:

x	$M=4,k=0$	$M=4,k=1$	$M=1,k=1$	$M=8,k=0$	$\lvert y-y_{101}\rvert$
0	2.37 e-8	4.63339 e-10	2.61472 e-11	6.32711 e-15	0.0000255
0.3	4.497 e-9	1.04070 e-10	5.93744 e-12	6.38417 e-15	4.53581E−6
0.2	3.8574 e-11	3.13685 e-12	2.31892 e-13	5.12340 e-16	1.32679E−7
0.2	6.5129 e-12	1.90014 e-12	1.48048 e-14	4.40110 e-17	9.91385E−8

Table 1.1: Bla bla bla

Figure 1.1: Universal journal of mathematics and applications

The code (autoref) Table 1.1 and Figure 1.1 must be used in Tables and Figures.
Besides the standard handbooks on LaTeX [9–12], please consult the short and useful guide [13–16].

2. Conclusion

In this section you should present the conclusion of the paper. Conclusions must focus on the novelty and exceptional results you acquired. Allow a sufficient space in the article for conclusions. Do not repeat the contents of Introduction or the Abstract. Focus on the essential things of your article.

Article Information

Acknowledgements: The authors would like to express their sincere thanks to the editor and the anonymous reviewers for their helpful comments and suggestions.

Author Contributions: The parts contributed by each author should be written in detail.

Artificial Intelligence Statement: Provide information about the use of artificial intelligence. This section must be filled in when submitting an article. If artificial intelligence was not used, it must be clearly stated.

Conflict of Interest Disclosure: Please indicate whether there is a conflict of interest. For example: No potential conflict of interest was declared by authors.

Plagiarism Statement: This article was scanned by the plagiarism program.
